I. Elements of Music: Rhythm, Timbre, Melody, Tempo, Harmony, Dynamics, etc.

Elements of music can be called the building blocks of music and are essential for two primary reasons:

- ✓ Performing and analyzing music – understanding any piece of music for listening and/or performing
- ✓ Composing music – become a “composer’s toolbox” to be able to build and create a piece of music.

The illustration of musical elements is taken from

<https://www.musictheoryacademy.com/how-to-read-sheet-music/the-elements-of-music/>.

Element 1 – Rhythm

Rhythm is the most fundamental building block of music. We can define rhythm as the word used to describe when and how long a sound should be played. This element of music is the underlying pulse that makes you tap your foot, clap your hands or dance along with the music. All music, no matter what kind, has some rhythm.

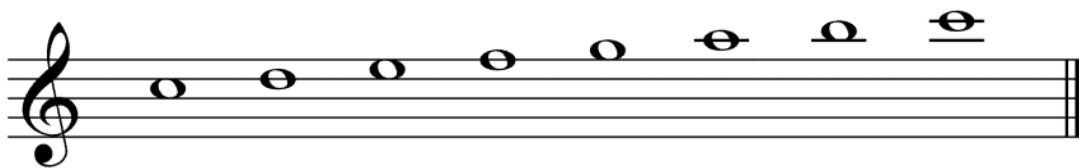

Think about your heartbeat. That is a rhythm with a pulse that pumps blood through your body. Rhythm is like the heartbeat of music that keeps it alive. This pattern of regularly recurring beats, accented and unaccented, is grouped together to create music.

Two important parts of rhythm are beat and pulse.

- **Beat** is the basic unit of time in music, and when it is repeated in a regular pattern, it creates a pulse. The beat is shown in music notation with the time signature, like 4/4 or 6/8. The time signature tells how many beats are in each measure and what type of notes receive one beat.
- The **pulse** in music is the strong accented beats that you tap along with as you hear the music.

Element 2 – Pitch

Pitch is the highness or lowness of a sound. High-pitched sounds can be a shriek whistle, while low-pitched sounds can include the low rumbling of thunder in the distance. Sound is created when sound waves cause the air to vibrate. The faster the waves vibrate, the higher the pitch of the sound. Slow vibrations create low-pitched sounds.

Look at the whole notes on the **staff** (the lines and spaces where music notes are written). (The curly design at the left is called the **treble clef** or “G clef.” It is the first clef musicians learn when they start studying music.) The whole notes begin in the middle of the staff at middle C and go up to high C above the staff. The higher the notes are written on the staff, the higher their pitch is. This illustration shows notes ascending (going up) in pitch. The illustration below shows notes descending (going down) in pitch.

Each note has a specific name and pitch. Most music played in the United States is made from the 12 notes in the **chromatic scale**. The notes in the chromatic scale include C, C#(or Db), D, D#(or Eb), E, F, F#(or Gb), G, G#(or Ab), A, A#(or Bb), and B. Notice that some notes have different names like C-sharp and D-flat.

Element 3 – Melody

Melody is the sequence of notes that makes a recognizable tune. The notes are repeated throughout the piece of music. The melody is the part of a song that people remember. Melodies can make you feel happiness or sadness or many different feelings. Some of the most familiar melodies are “Happy Birthday” and “Jingle Bells.”

Melodies cannot be just one note. They must be a series of notes – probably more than two or three notes. “Happy Birthday” is a very short, easy melody with 25 notes. Melodies are simple to memorize and repeat. The notes surrounding the melody must be separate enough to be recognized as the melody. Simply, a melody must be hummable.

Melodies are made of short sections called **phrases**. Phrases comprise from two to three notes to ten or more notes. The phrases usually end in a **cadence**. A phrase in music is like a sentence in grammar. Sentences end with punctuation marks. Musical phrases end with at least two chords next to each other. Those two chords make up the punctuation marks of music called cadences.

Another small part of melodies is the **motif**. A motif in music is a very short, recognizable part of the melody. Think of Beethoven’s *Fifth Symphony* or the sound when the shark appears in *Jaws*. Those are examples of motifs in music.

Element 4 – Harmony

Harmony means when two or more notes are played or sung at the same time. When many instruments play notes together or when many singers sing different notes at the same time, harmony is created.

Sometimes when notes are played together, they sound good or pleasant. This is called **consonance**. It is called dissonance when notes are played together that do not make the listener feel calm or restful. Jazz music is based on dissonant sounds. Hymns are based on consonance sounds. Another example of consonance in music is a barbershop quartet where each singer sings a different note to blend into a single harmonious (good-sounding) song.

Element 5 – Texture

Texture in music is the “feel” that the sounds create. Musical texture can be:

- Thick – many layers of instruments with a lot of melodies and harmonies played at the same time
- Thin – only a few instruments with only one or two melodies
- Open – music with a large gap between the highest and lowest notes
- Closed – music with all instruments playing notes very close together
- Wide – synonymous with open texture
- Spacious – synonymous with open texture
- Tight – synonymous with closed texture

Other words used to describe musical texture are *monophonic*, *homophonic*, and *polyphonic*.

- *Monophonic* means music with one melody or tune played or sung by one person on a musical instrument. Examples of monophonic music include the “Alphabet Song” or “Yankee Doodle.”

Monophonic

- *Homophonic* is the most common type of musical texture in music in the United States. In homophonic music, a singer sings a melody with a guitar or piano accompaniment. The “Hallelujah Chorus” by Handel is an example of homophonic music.

Homophonic

- Finally, *polyphonic* music means music with many sounds played or sung at the same time. Rounds like “Row, Row, Row Your Boat” are examples of polyphonic music. (A round is the simplest form of music called a *canon*.) Each person sings the melody in rounds at different times, so the melodies overlap. Dixieland jazz is another example of polyphonic music. Another type of polyphonic music called the fugue was very popular in Baroque music. Bach composed many famous fugues, including *Fugue No. 17 in A-flat Major*.

Polyphonic

Element 6 – Timbre

Timbre is also called tone color or tone quality. *Timbre* is the specific sound that makes a musical instrument recognizable. It makes it possible to determine whether the instrument playing is a saxophone or a violin. The timbre of instruments can be affected by their size, shape, and construction materials. For example, a flute made of wood has a distinctly different sound than a flute made of metal. The human voice has a timbre, too. That’s why we can recognize a person by the sound of their voice.

A good example to hear different timbres is *Peter and the Wolf* by Prokofiev. Each character in the musical story is portrayed in this piece by a different instrument. In *Peter and the*

Wolf, Peter and his friends capture a wolf. The instruments that represent each character include:

- ✓ Peter – complete string section
- ✓ Bird – flute
- ✓ Cat – clarinet
- ✓ Duck – oboe
- ✓ Grandfather – bassoon
- ✓ Wolf – horns
- ✓ Hunters – timpani and bass drum

Here is a link to the recording narrated by Sir John Gielgud. It is an excellent recording, with the story told through narration and music. You will be able to hear the different timbres played by the orchestra's instruments.

<https://www.youtube.com/watch?v=oZ5WMZUbKy4>

TIMBRE

Timbre (or tone-colour) describes the particular sound quality of an instrument or voice.

Compare the different tones of each instrument to the tones on the colour wheel. Because each musical instrument is made of a different material, none sounds the same.

VOICE

Each voice sounds different and has a different tone quality.

DRUM

A drum belongs to the percussion family. It usually consists of a skin and a shell.

TRUMPET

The trumpet is made of brass. It belongs to the brass family.

The piano is a percussion instrument. Each key when pressed activates a hammer which strikes the strings inside.

PIANO

A clarinet is usually made of wood and has a reed. It belongs to the woodwind family.

CLARINET

A violin is hollow, is made of wood, and is played with a bow. It belongs to the string family.

VIOLIN

REMEMBER!

The difference between a note on a violin and the same note played on a clarinet at the same pitch and volume, is the difference in tone-colour or timbre. This is caused by how an instrument is made and the material of which it is made.

(daydreameducation.co.uk)

Element 7 – Dynamics

Dynamics in music means how loudly or softly the music is played. Certain words are important indicators of the loudness of a note. The most common are *piano* (meaning soft) and *forte* (meaning loud). The sound can get louder by changing the dynamics (*crescendo* – gradually getting louder) or softer by changing the dynamics (*decrescendo* – gradually decreasing the sound volume. Another word that means the same as *decrescendo* is *diminuendo*).

The following are common dynamics markings for music:

- ✓ *Piano* - quiet or soft in music – represented by lower case *p*
- ✓ *Forte* – musical term for loud – comes from the Italian meaning “strong” – represented by *f*
- ✓ *Mezzo* – musical term for moderately loud or half – it is usually placed in front of piano (*mp*) and forte (*mf*) to mean moderately quiet or moderately loud – represented by *m*
- ✓ *Pianissimo* – musical term meaning very quiet – represented by *pp*
- ✓ *Fortissimo* – musical term meaning very loud – represented by *ff*
- ✓ *Pianississimo* – musical term meaning very, very quiet – represented by *ppp*
- ✓ *Fortississimo* – musical term meaning very, very loud – represented by *fff*

Music Dynamics Chart

<i>ppp</i>	<i>pianississimo</i>	Very, very soft.
<i>pp</i>	<i>pianissimo</i>	Very soft.
<i>p</i>	<i>piano</i>	Soft.
<i>mp</i>	<i>mezzo piano</i>	Moderately soft.
<i>mf</i>	<i>mezzo forte</i>	Moderately loud.
<i>f</i>	<i>forte</i>	Loud.
<i>ff</i>	<i>fortissimo</i>	Very loud.
<i>fff</i>	<i>fortississimo</i>	Very, very loud.

Element 8 – Tempo

Tempo is the speed at which a piece of music is played. It can be fast, slow, or in between. Tempo changes can add interest and variety to a piece of music. Like dynamics markings, tempo markings are Italian terms with specific meanings. The following chart shows the basic tempos in music.

Tempo

<i>Presto</i>	very fast (168–200 bpm)
<i>Allegro</i>	fast and bright (120–168 bpm)
<i>Allegretto</i>	moderately fast
<i>Moderato</i>	moderately (108–120 bpm)
<i>Andante</i>	at a walking pace (76–108 bpm)
<i>Adagio</i>	slow and stately (66–76 bpm)
<i>Grave</i>	slow and solemn
<i>Lento</i>	very slow (40–60 bpm)

Element 9 – Form

Form in music tells how the piece of music is organized and is considered the “shape” of the music. The most common form in popular music is *Verse-Chorus-Verse*. This form is called the A-B-A form, where the verse is repeated once, followed by the chorus, and the verse is repeated. Two other forms are the *Rondo* form, shown as A-B-A-C-A, and the Sonata form indicated as A-B-A-C.

CATEGORY 2

PURPOSES AND
STYLES OF MUSIC
INCLUDING
HISTORICAL AND
CULTURAL ASPECTS

II. Purposes and Styles of Music, including Historical and Cultural

A. Latin Music

The term Latin music comprises music from the Iberian peninsula and areas of South America. The Grammy Awards did not recognize this music style until 1975. Music must be performed in Spanish or Portuguese to be considered for a Latin Grammy.

The following music styles are important types of Latin music:

- **Tango** – Originated simultaneously in Argentina and Uruguay – called “Argentine tango” because of the immigrant communities in Buenos Aires whose dancing became the style that we recognize today – dance comprises sensual dance moves and intense music – started as an underground dance craze and became more popular after World War II – best known for staccato rhythm and abrupt, sharp movements – Instruments include piano, guitar, violin, bandoneon (concertina used in South America), limited flute music
- **Salsa** – Cuban artists who immigrated to New York brought the style with them – eventually blended with African American jazz – after the rise of the Castro regime, Cubans could not travel to New York to share musical styles – Puerto Rican music took over, blending Cuban, Afro-American jazz, Latin boogaloo, and mambo to create salsa
- **Mariachi** – Mexican music played mainly with stringed instruments for all kinds of celebrations, including weddings, birthdays, etc. – spread from Mexico with the spread of radio stations – International Mariachi Festival held annually
- **Samba** – Brazilian music – originated in Africa and was brought to Brazil with enslaved persons between the 16th and 19th centuries – primarily played with percussion instruments, whistles, surdos, and shakers
- **Merengue** – Dominican Republic music based on African music – became accepted after the accordion was introduced from Germany – central element is the quintillo (rhythmic pattern of 5 beats) – Rafael Trujillo, a dictator in the country, liked the music and created a campaign to spread it throughout the country.

B. Medieval Music

Medieval music is music from the Medieval period or Middle Ages. It lasted from c.500 to 1400 and is the longest period of music. Important characteristics of Medieval music include:

- *Gregorian chant* – a type of plainchant – a Latin sacred song sung without accompaniment – takes its name from Pope Gregory I, who had the chants collected and organized during medieval times
- *Neumes* - signs written above chants to indicate the direction of the pitch.
- Instruments of the Medieval Period include:
 1. Wooden flutes
 2. Dulcimer
 3. Lyra – one of the first bowed instruments
 4. Recorder
 5. Lute

C. Gospel Music

Gospel music is an American Protestant music genre. It developed in different styles within various communities. Gospel songs were taught through Sunday-school hymnbooks. The movement expanded after the Civil War. It eventually evolved into a genre called country gospel with such music groups as The Statler Brothers and the Oak Ridge Boys. African American gospel music blended ragtime, blues, and jazz. Its roots can be traced to the hymnals of the early 19th century.

D. Popular

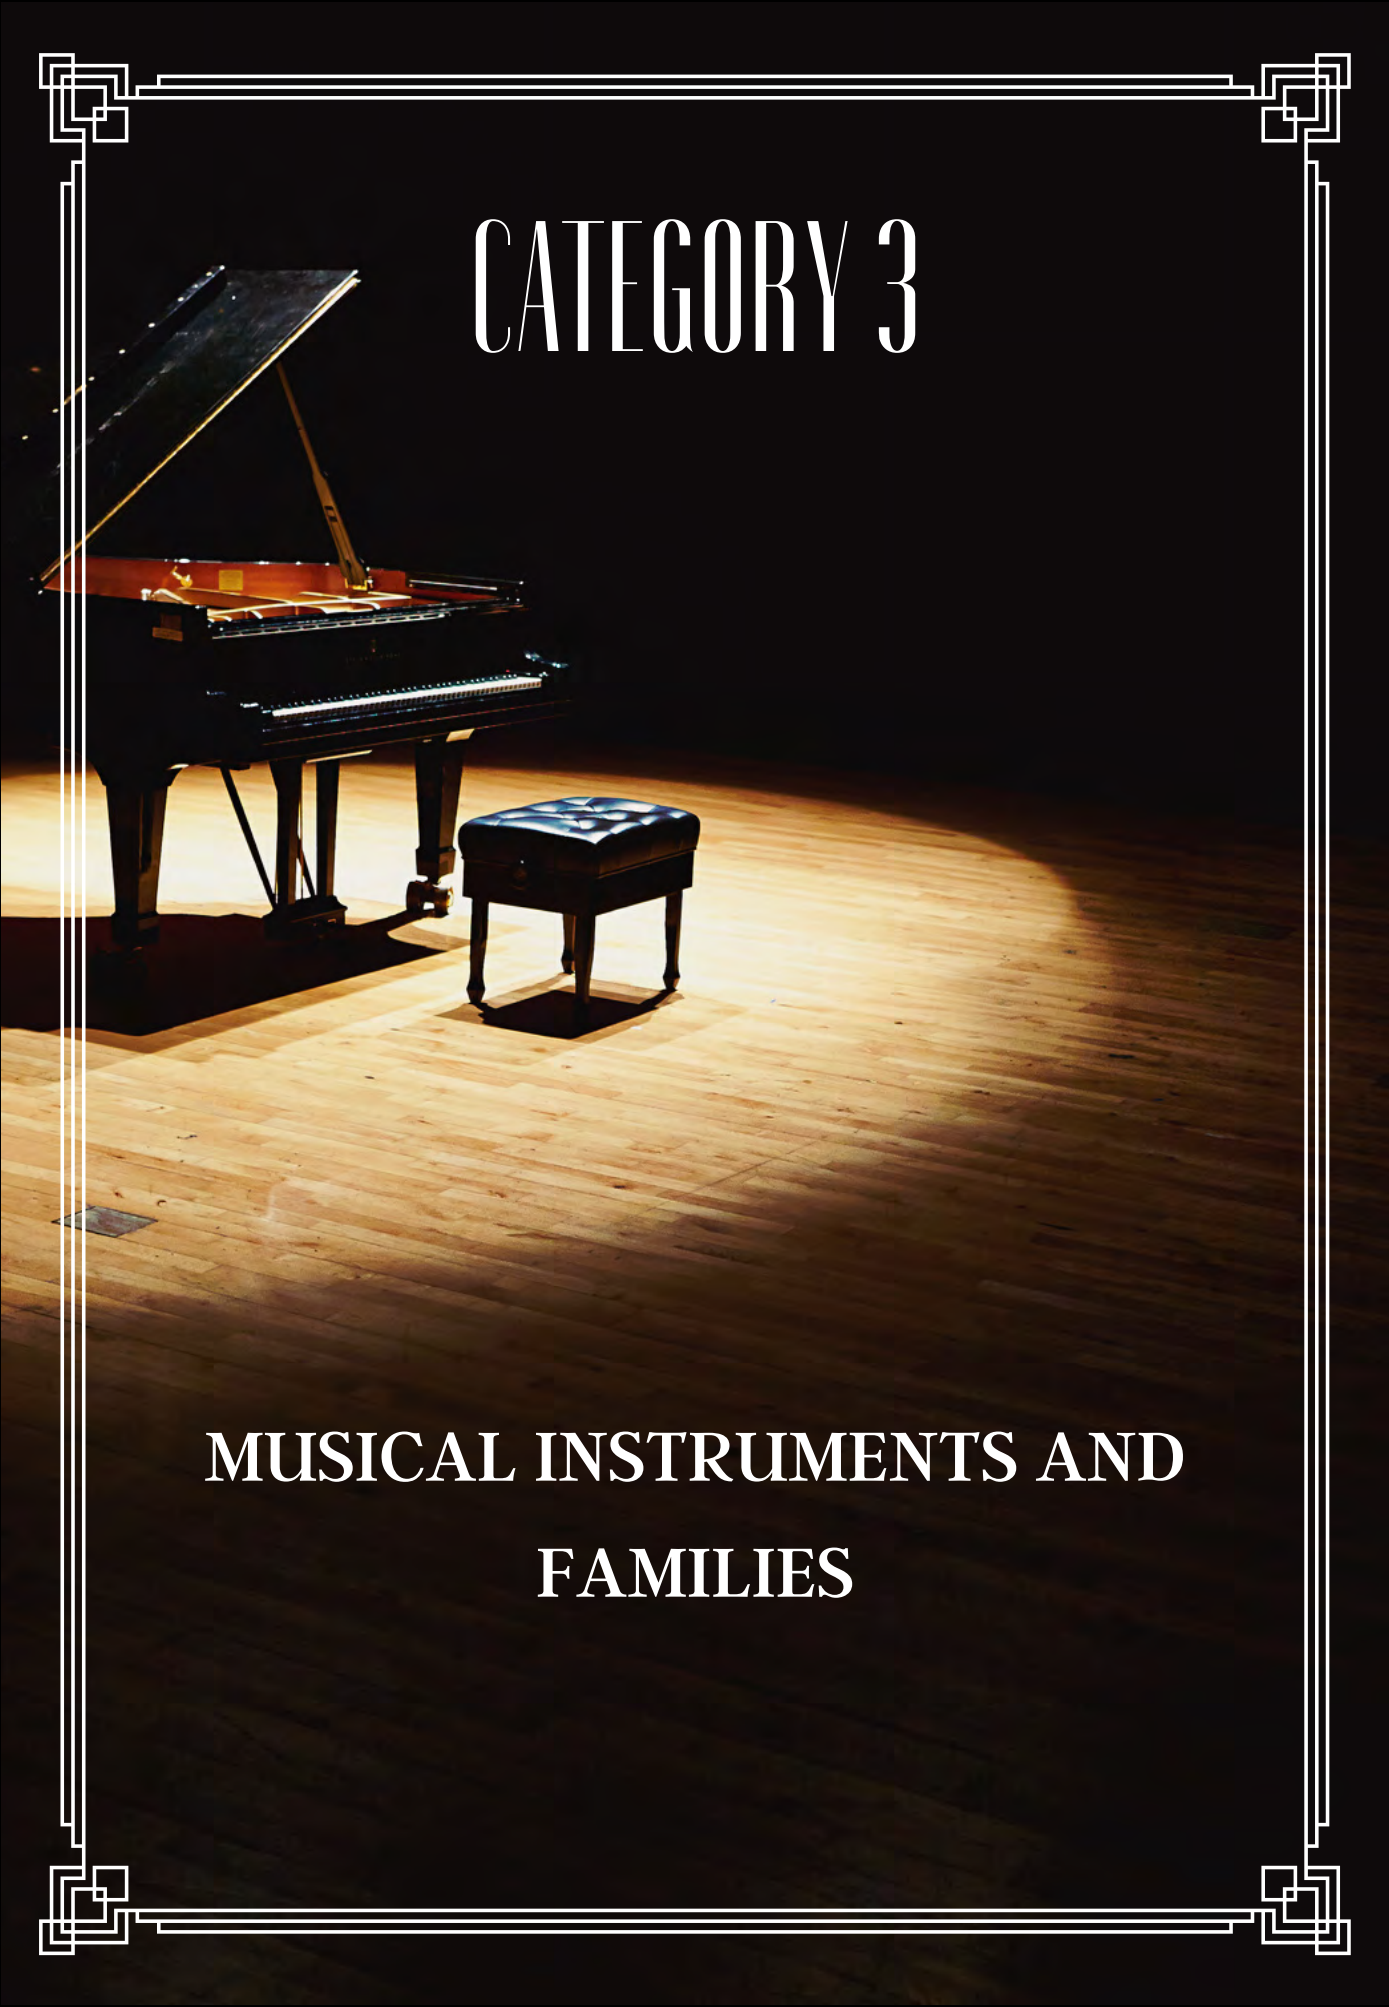

Popular music is written for sale. Urban cultures dominate this music. Unlike folk music, popular music is composed by known musicians and does not develop through oral tradition. Popular music began to replace folk music after the beginning of the Industrial Revolution. Such musical figures as Elvis Presley and the Beatles helped elevate popular music to its current status in the music world.

E. Ballads

Musical ballads tell a story. Ballads originated in the 13th century with medieval Scottish dance songs and followed the storytelling of the German and Scandinavian cultures.

Types of ballads include:

1. Traditional ballads – folk songs that tell a story – Examples include “Froggy Went A’Courtin’,” “Whaling Song,” “Gypsy Davy.”
2. Broadside Ballads – sheets called broadsides on which lyrics were printed – sometimes only included words with no musical notations – designed to spread current news like tabloids – Examples include “The Ballad of Jesse James” and “The Roving Boy.”
3. Pop Ballads – romantic, evocative songs – may not always follow the same format as other ballads but still tell a story – Famous pop ballads include Led Zeppelin’s “Stairway to Heaven” and Prince’s “Purple Rain.”

A photograph of a grand piano and a piano stool on a wooden floor, illuminated by a spotlight. The piano is dark-colored with its lid open, and the stool is black with a tufted top. The floor is light-colored wood, and the background is dark. The entire image is framed by a white double-line border with decorative corner pieces.

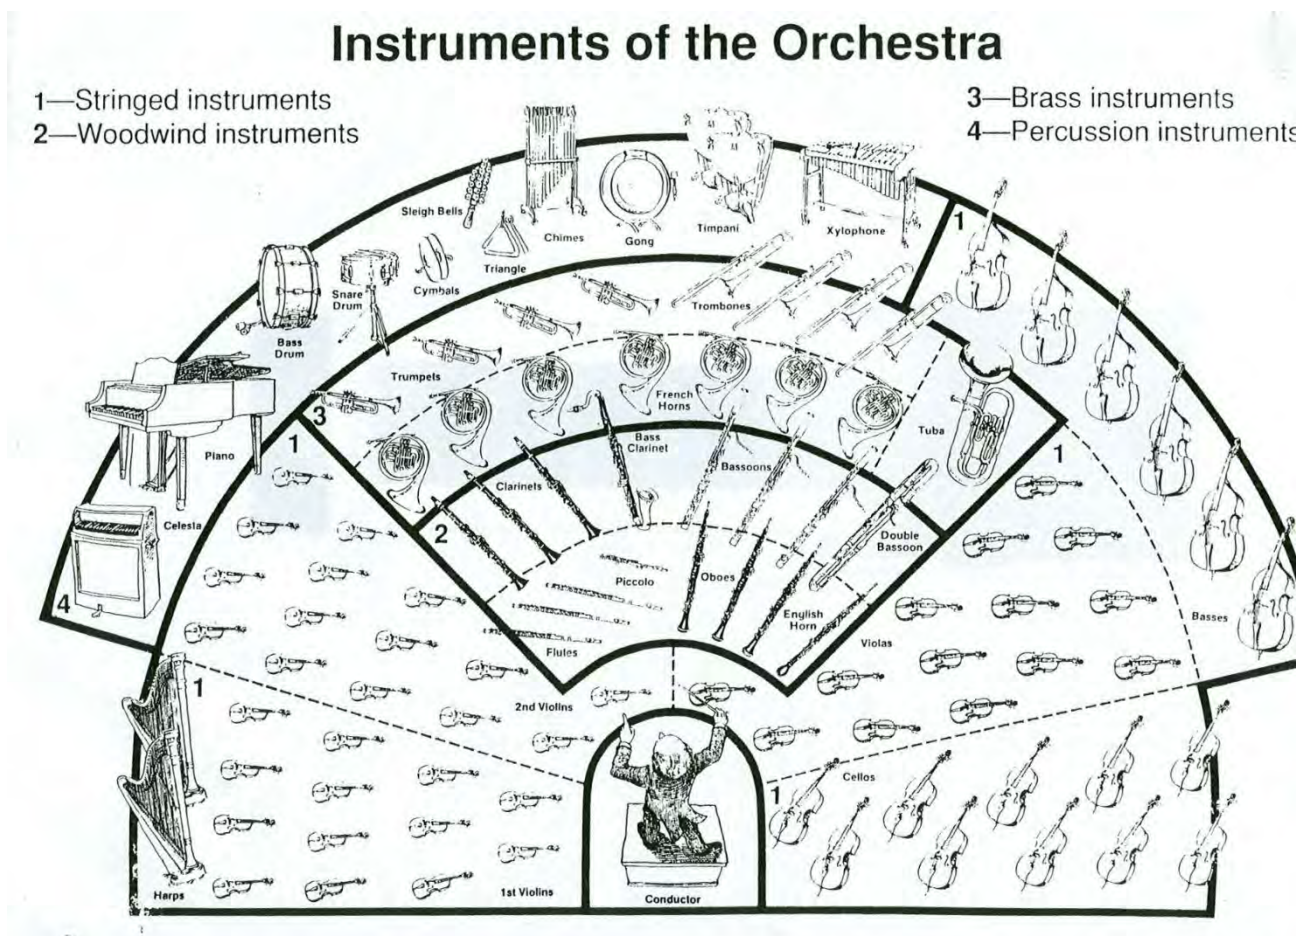

CATEGORY 3

MUSICAL INSTRUMENTS AND
FAMILIES

III. Musical Instruments and Families

A conductor leads an orchestra, usually containing many stringed instruments, such as the violin, cello, and viola. There are two main types of orchestras, a *chamber orchestra* with less than 50 musicians and a *symphony orchestra* with 100 or more musicians. Chamber orchestras usually play in smaller venues or chambers and mainly consist of string instruments. Vivaldi, Mozart, and Chopin composed many works for the chamber orchestra. A symphony orchestra, on the other hand, plays in a large venue. These orchestras play larger pieces (symphonies) by such famous composers as Bach, Beethoven, and Grieg.

Instruments are typically divided into families based on their characteristics and how they are played.

1. The first family, the ***string family***, includes any instrument that produces sound by strings' vibration. Violins, violas, and cellos comprise most of the instruments in the orchestra. However, a symphony orchestra may include a harp, classical guitar, and double bass.
2. The second family of musical instruments is the ***woodwind family***. Woodwind instruments produce sound when the musician blows through a reed into a hollow tube. The instrument may contain one (single-reed) or two (double-reed) reeds. The sound is controlled by the opening and closing of holes in the tube. The longer the tube, the lower the sound that will be produced. Shorter tubes produce higher-pitched sounds. Examples of double reed instruments include the oboe and bassoon. Flutes and piccolos do not have reeds but are classified as woodwinds. Orchestras usually contain large sections of flutes, clarinets, oboes, and bassoons. The orchestra may employ one piccolo, one bass clarinet, and one contrabassoon depending on the composition.
3. While the third family also comprises wind instruments, all of these instruments are made of metal. Usually, the metal used to make these instruments is brass, hence the name, ***brass family***. Brass instruments are tubes that end in a bell shape and are played with a cup-shaped mouthpiece. Some of the instruments are twisted into multiple coils to make them easier to hold. Examples of brass instruments include the trumpet, French horn, and tuba.
4. The final generally accepted family of instruments is the ***percussion family***. The sounds of percussion instruments are created by hitting or shaking the instruments. Drums are not the only percussion instrument, but many people automatically think of drums when they hear the word percussion. Besides drums, the percussion family includes the xylophone, tambourines, maracas, and gongs.

Musical Instrument Families

Classification	Instrument	Description
Idiophone		Classification of instruments that includes concussion, percussion, and plucked as some of the varieties – includes instruments like the rattle that are played by hitting, striking, shaking, or scraping
Membranophone		Commonly called percussion instruments – constructed of stretched skins or membranes – examples include drum and tambourine
Aerophone		Instruments that make sound by vibrating columns of air that musicians create by forcing air through the columns – examples include organs and oboes
Percussion	Slit Drum 	Hollow percussion instrument with cuts in the shape of an “H” that produces different sounds based on the instrument’s size – commonly made from bamboo or other similar logs found in many cultures

Percussion	Sistrum 	Ancient Mesopotamian percussion instruments shown in relief of Amenhotep III – sacred instruments in ancient Egypt and are seen in hieroglyphs – have been replaced in modern music with tambourine
Wind instrument	Shofar 	Plays an important role in Jewish holidays – made from the horn of any animal of the Bovidae family, but is commonly made from ram's horn – used to mark the end of the fast at Yom Kippur
Percussion	Gong 	Round instrument, developed in Burma and Tibet – played by striking the surface with a soft mallet – the harder it is hit, the louder the sound - used in compositions of Wagner and Mahler

String	Guitar 	String instrument that began gaining popularity during the Baroque Era of music – has 6 strings – may be one of 2 types (tenor or bass) – can be acoustic or electric
Percussion	Castanet 	Instrument used especially by dancers – consists of two small shells of hardwood, plastic, or ivory usually attached to the thumb and clicked together by the other fingers – mainly used in Spanish or Latin-influenced music
Percussion	Clave 	Originated in Australia – pair of cylindrical hardwood sticks beaten together as a percussion instrument
Percussion	Tambourine 	Instrument resembling a small shallow drum with small metal disks in slots around its circumference – played by being shaken or struck with the hand

Percussion	Rattle (aka Ratchet) 	Musical instrument played by whirling the mechanism around the handle – it is also used as a warning or signaling device
Woodwind	Saxophone (aka sax) 	Instrument played by blowing air across a single reed and pushing keys to create different sounds – commonly used in jazz bands – was invented by Belgian clarinetist – has a tone somewhere between brass and woodwind – used in jazz, classical, and pop music – 3 saxophones in the orchestra
String	Double Bass 	Developed in Western Europe - Member of symphony orchestras and string ensembles – largest bowed instrument in the orchestra – can be played with a bow or in some musical compositions by plucking the strings – 6-foot tall instrument part of the viol family

Aerophone	Calliope  The Big Top Calliope	Developed in Western Europe and North America – represents the mood in the circus because of its loud sound – has a keyboard and series of large whistles through which steam is forced – sometimes can be seen in parades
String	Violin (aka Fiddle) 	Bowed stringed instrument that evolved from the Renaissance – fretless fingerboard – strings attached to tuning pegs, passing over a bridge – Antonio Stradivari was famous for his violins
String	Viola 	Tenor member of the violin family – longer than the violin with 4 strings – modern symphony orchestra usually has between 6 and 10 violas – integral part of string quartets and chamber music

String – Keyboard – Percussion – (Note: Family of instruments has been debated)	Piano (aka pianoforte) 	Keyboard instrument with 88 keys and wire strings that sound when struck with felt-covered hammers operated from the keyboard – pedals affect the loudness or softness of the notes – has the largest range of any orchestral instrument - invented by Bartolomeo Cristofori about 1709
String	Cello 	Also called Violoncello – bass member of the violin family with 4 strings – has deeper ribs and a shorter neck than the violin – developed during the 16th century – during this time, it frequently had 5 strings
Brass	Trumpet 	Musical instrument with a flared bell and bright tone – has been around since 1500 B.C. in various forms – originally used as signaling instrument for the military – modern versions have long tubing to form a straight-sided coil with 3 valves – can play 45 different notes - commonly used in classical and jazz ensembles – up to 4 trumpets in an orchestra

Brass	Horn	Any of several different musical instruments played by tensing the lips against a mouthpiece – includes French horn, etc.
Brass	Trombone 	Also called the sackbut – originated in France – has a sound lower than the French horn but not as low as a tuba – developed from the trumpet common in the Medieval era – the only brass instrument that uses a slide instead of valves to change pitch
Brass	Tuba 	Modern version originated in Germany – deep pitched brass wind instrument with valves and conical bore – Wagner tubas are 4-valved and were developed by Wagner for his <i>Ring Cycle</i>
Brass	French Horn 	First used in ballet in Paris in 1664 – composed of 12 – 13 feet of pipe with 4 valves – said to be the most difficult instrument – orchestras have 2 – 8 French horns

Brass	Sousaphone 	Developed in the U.S. – in the tuba family and was first created with the directions of John Philip Sousa – designed to be played easier than the concert tuba for marching bands
Woodwind	Flute 	Originated in France – classical instruments – unlike woodwinds, do not have a reed – one of the oldest instruments in the world – held to the side and played by blowing across the mouthpiece and opening or closing the keys – sometimes called transverse flute because of the way it is played – the orchestra has up to 4 flutes, one of which can be piccolo
Woodwind	Oboe 	Double reed instrument – originated in Western Europe – all other musicians tune their instruments to the first oboist's A note

Woodwind	 Clarinet	Originated in Germany – a single-reed instrument can be a B-flat or Bass clarinet – most commonly played is the B-flat version – sometimes called licorice stick – 2 to 4 clarinets in an orchestra
Woodwind	 English Horn	Double reed instrument, larger than an oboe, with bulb-shaped end instead of flared end
Woodwind	 Bassoon	Originated in Western Europe – reed instruments with the longest tubes of the woodwind section and produce the lowest notes – double reed fits into a curved mouthpiece
Woodwind	 Piccolo	Originated in Western Europe – a smaller version of the flute with the highest pitch of the woodwind family – orchestra may have 1 piccolo
Woodwind	 Contrabassoon	Also called Double bassoon – a larger version of the bassoon and sounds an octave lower

Aerophone	Concertina 	Free reed instrument – originated in Europe – played by stretching and squeezing between the hands to work a central bellows that blows air over the reeds, each note being sounded by a button
Mallet Percussion	Xylophone 	Originated in Ghana, Uganda, and Zambia – has wooden keys arranged from longest to shortest along a wooden or metal frame – musician plays the instrument by striking the keys with a mallet – both marimba and xylophone can look identical except for the tone plates – the tone plates of the xylophone are wavy – has a hard sound – have bars made of rosewood
Percussion	Cymbal 	Originated in Romania – thin round plates of spun bronze – make loud crashing sound when striking them together – may also be played by striking one with a mallet

Percussion	Timpani (singular is timpano) 	Set of drums made up of large copper bowls with a goat or calf-skin head – pedals allow the timpanist to change the pitch of the drums – played by striking the head with a wood shaft covered in felt – usually 4 timpani drums of different sizes and pitches in an orchestra – only percussion instrument that can be tuned to different pitches
Mallet Percussion	Glockenspiel (aka orchestral bells) 	Originated in France & Germany – this instrument is related to keyboard instruments – tone bars made from aluminum alloy – may have resonators extended under tone bars – some use a wooden tone box as resonating chamber – plays a higher range of notes with a piercing sound
Percussion	Guiro 	Originated in Cuba & Panama – has a serrated surface that gives a rasping sound when scraped with a stick – made from an elongated gourd and used in Latin American music

Percussion	Maraca 	Originated in Venezuela and Mexico – made of hollow gourds filled with seeds or beads like a rattle – played by shaking
Mallet Percussion	Marimba 	Originated in Africa, Guatemala, Mexico, Honduras, Nicaragua, and Costa Rica – often confused with the xylophone – both marimba and xylophone can look identical except for the tone plates – the tone plates of the marimba are hollowed out and wavy – have bars made of rosewood – has a soft, mellow sound – largest instrument in mallet percussion family – can cover 5 octaves – contains resonator tubes below tone bars
Mallet Percussion	Vibraphone 	Lowest range of the metallic percussion instruments and has a soft, mellow sound – has metal resonators suspended below the tone bars – motor-driven rotating disks called fans allow the player to add a vibrato effect to the sound – tone bars made from aluminum alloy and are anodized to appear gold or matte silver

Mallet Percussion	Chimes (aka tubular bells) 	Have the smallest range of the mallet percussion instruments – can only play 1.5 octaves – sound like church bells – consists of 22 or fewer cast bronze bells called tubular bells of varying lengths and arranged from longest to shortest and hung on a frame – each tube makes a different pitch
Percussion	Bass Drum 	Largest member of percussion family – produces deepest notes – played with felt-tipped mallets
Percussion	Snare Drum 	Small drum that cannot control the pitch – it makes a rattling sound and is used for drum rolls – played with a pair of wooden drumsticks

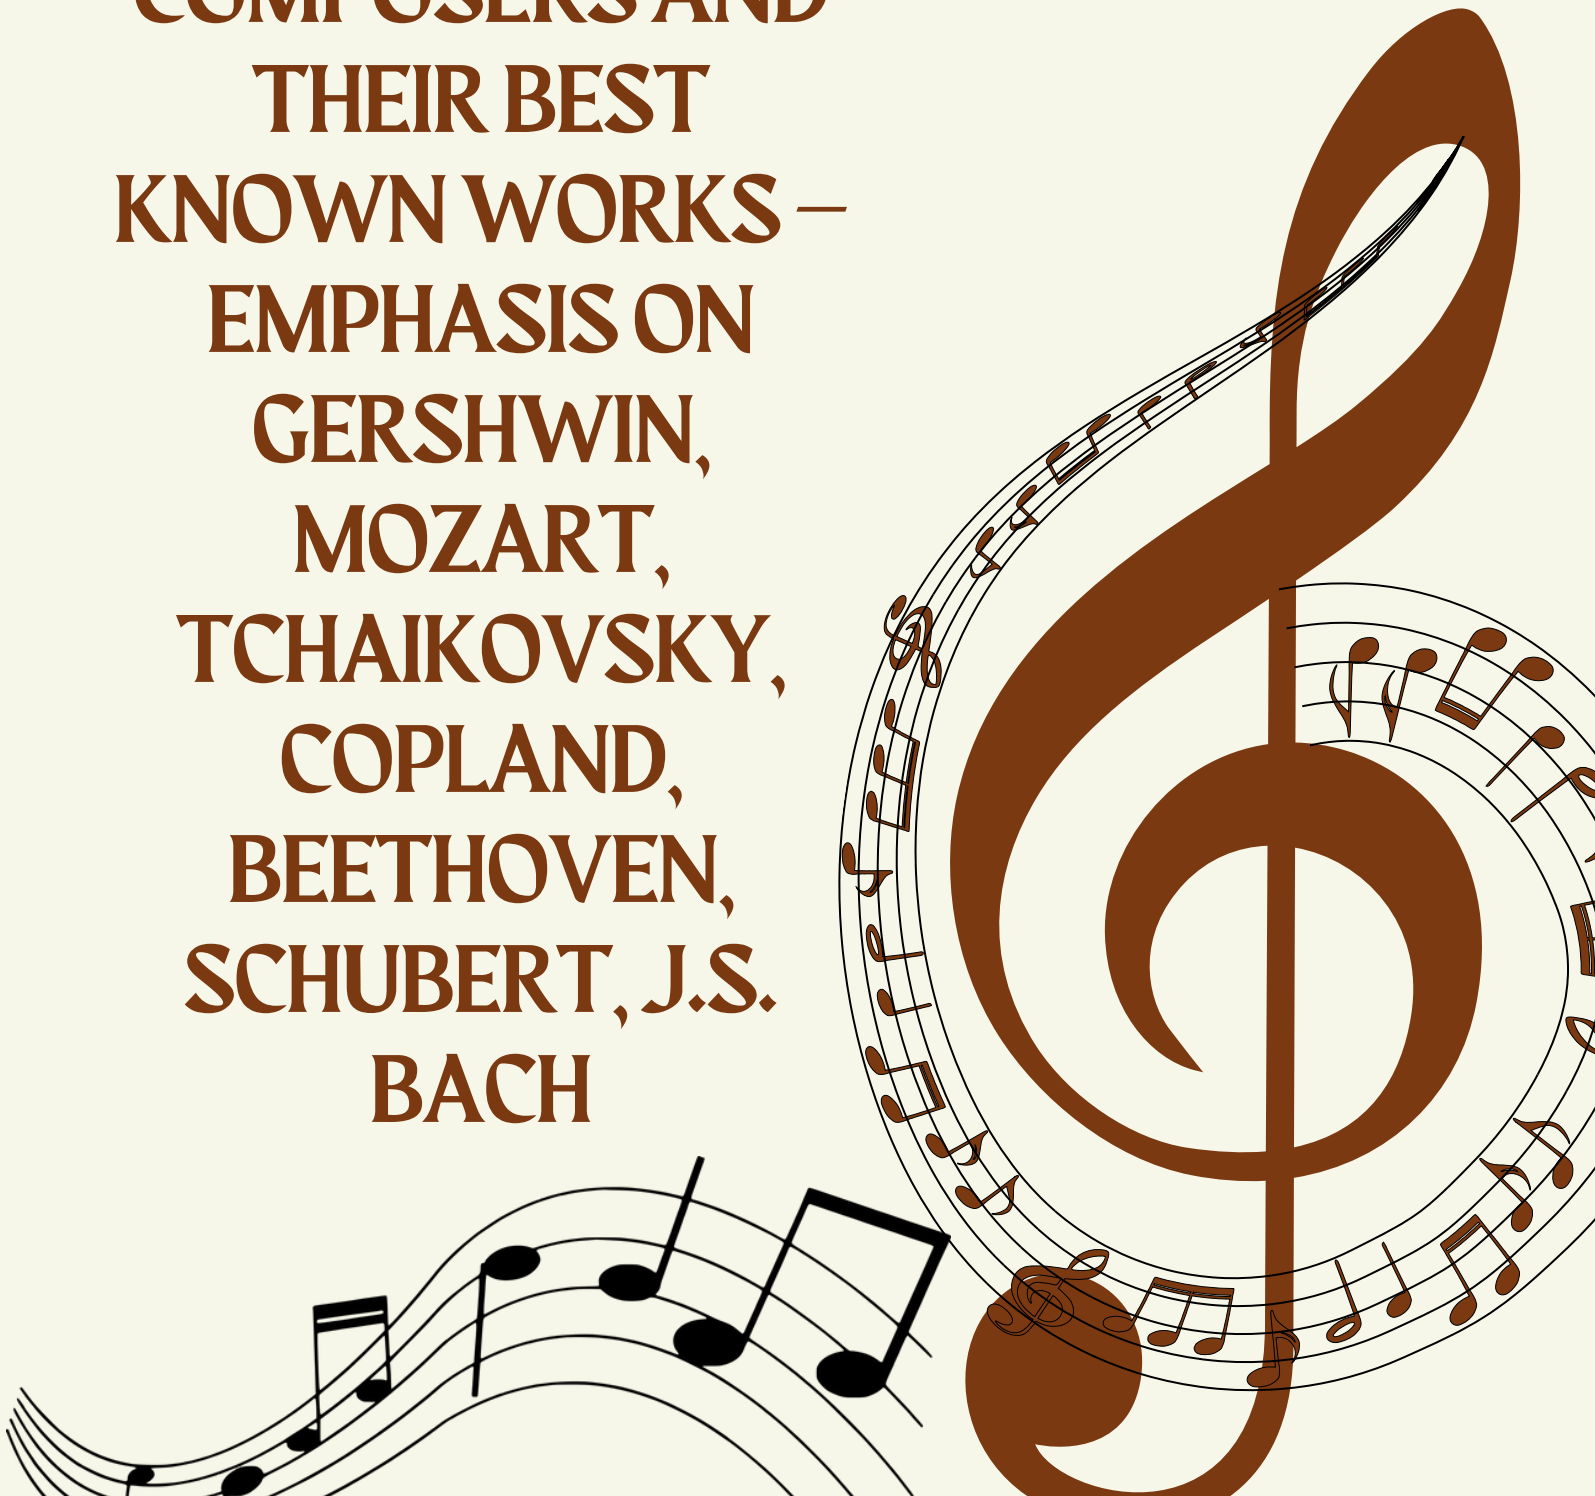

Percussion	Triangle 	Developed by the Cajuns – a difficult instrument to play because it is difficult to control the notes – the size of the triangle and the beater used to play it determine its sound – it is a thin tube bent into an equilateral triangle shape that is held with a single cord
Percussion	Barrel Drum 	Percussion instrument named because it resembles barrel – wider in the middle than on the ends – membrane covered top and open at bottom – most popular in Asian countries
Percussion	Conga 	Type of drum that originated in the Caribbean – also called <i>tumbadora</i> – tall, narrow, single-headed drum – used in Afro-Cuban music genres such as conga and rumba

Wind	Celesta 	Invented in 1886 in Paris by Victor Mustel – played by pressing a key on a keyboard and a felt hammer strikes the sound plate – makes tinkling sounds – used by Holst in <i>The Planets</i> and Bartok in <i>Music for String Instruments, Percussion, and Celesta</i>
Wind	 Didgeridoo	Originated in Australia by Aboriginal people–wind instrument played with vibrating lips to produce continuous drone
Wind	Pipe organ 	Free reed instrument – played by forcing air through a series of tubes – often used in church music
String	Dulcimer 	Trapezoidal zither similar to a psaltery – played by striking strings with handheld hammers

String	Appalachian Dulcimer 	Developed in Germany and brought to U.S. – 3 or 4-stringed fretted instrument generally played on the lap by strumming with a pick
String	Balalaika 	Developed in Russia – triangular shaped body with a fretted neck and three strings – played by rapid strumming or plucking
String with keyboard	Clavichord 	Originated in Western Europe – stringed rectangular instrument used primarily during Middle Ages and Renaissance – most often used as practice instrument – played by striking brass or iron strings with small metal blades called tangents – doesn't play loud enough to use for large performance areas

FAMOUS
COMPOSERS AND
THEIR BEST
KNOWN WORKS –
EMPHASIS ON
GERSHWIN,
MOZART,
TCHAIKOVSKY,
COPLAND,
BEETHOVEN,
SCHUBERT, J.S.
BACH

IV. Famous Composers and Their Best-Known Works – Emphasis on Gershwin, Mozart, Tchaikovsky, Copland, Beethoven, Schubert, J.S. Bach

A. George Gershwin

George Gershwin (1898 – 1937) 	American Jewish composer and pianist Born and raised in the Yiddish Theater District of Brooklyn Brother Ira – worked as a team to create many works Awarded a special Pulitzer posthumously in 1998, commemorating his 100th birthday	<i>Rhapsody in Blue</i> (1924) – musical composition for piano and jazz band <i>An American in Paris</i> – (1928) – jazz-influenced orchestral piece – used taxi horns in performance <i>Strike up the Band</i> – (1927) – musical about a cheese manufacturer who sponsors war with Switzerland <i>I Got Rhythm</i> – (1930) – a song from the musical <i>Girl Crazy</i> <i>Porgy and Bess</i> – (1935) – tells the story of Porgy and his love for Bess - American opera includes the song “Summertime.”
---	---	--

B. Mozart

Wolfgang Amadeus Mozart (1756 – 1791)	Austrian Classical composer Wrote in all musical genres of his day Called himself Wolfgang Amade or Wolfgang Gottlieb Was composing by age 5 Played in royal courts from an early age	<i>Bastien und Bastien</i> – early German singspiel presented privately <i>La finta semplice (The Feigned Simpleton)</i> (1767) – opera buffa when he was only 12 <i>Mithridates, King of Pontus</i> – opera premiered at Regio Ducal Teatro – big success <i>Lucio Silla</i> (1772) – opera
---	--	--

Toured Italy 3 times, performing and presenting his composed operas, etc.

Became salaried Konzertmeister - 1774

**ELEMENTS OF
DANCE, TYPES OF
DANCE, AND
APPROPRIATE
DANCE WEAR**

V. Elements of Dance, Types of Dances, and Appropriate Dancewear

A. Elements of Dance

There are five basic elements of dance. These elements can be remembered by the acronym **BASTE**.

Body

Action

Space

Time

Energy

Body is the medium and subject matter used to create a dance. It is the figure or shape felt by the dancer and seen by others. It includes the muscles, bones, breath, balance, and reflexes.

Action is any human movement included in dancing. It can consist of dance steps, facial movements, lifts, gestures, and even everyday movements like walking or skipping. Sometimes these actions are choreographed, and other times they can be improvised.

Space is the place where the dance occurs. It may be a single place, or the dancers may travel to different places while dancing. Space also refers to the interaction of dancers with other dancers and objects in the performance area.

Time is the “when” of dancing. It involves accent and rhythmic patterns or free rhythms. The duration of movements and their sequential timing, whether fast or slow, and predictable or unpredictable intervals, are all parts of the element of time.

Energy is the “*how*” of the movements in dance. Energy includes the use of force, tension, and weight. Energy also reveals emotional states during the dance.

B. Types of Dances

1. **Ballroom Dances** – These dances first appeared in Italy during the Renaissance. Their popularity spread across Europe, the United States, and the world. This style of dance is very elegant. To be a ballroom dance, a couple must perform as partners in the dance. Today's most popular ballroom dances are the waltz, tango, cha-cha-cha, Foxtrot, and jive. Other ballroom dances include the mambo, rumba, and samba.

- **Waltz** - This slow dance was first introduced in the mid-19th century and popularized by Johann Strauss's music (the Waltz King). The waltz is a ballroom dance in the closed-hold position. It is danced in $\frac{3}{4}$ time and contains many turns and change steps. The couple dancing frequently turns in a clockwise or counter clockwise direction as they move across the floor. Fred Astaire and Ginger Rogers often performed waltzes during their movies.
- **Tango** - This social and partner dance originated in Argentina along the Rio de la Plata in the 1880s. It became popular due to a shortage of women in the working class people of the area. The style performed in dance competitions is called the International style and was developed in England. The woman is held in the crook of the man's arm. She holds her head back and rests her hand on the man's hip while the man leads her around the room in a curving pattern. Women usually wear high heel tango dance shoes and dresses with asymmetrical hemlines.
- **Cha-cha-cha (aka cha-cha)** – This is a playful and flirtatious dance. It originated in the 1940s in Cuba. It requires small steps and a lot of hip movements. It is danced in 4/4 time, with the fourth beat being split into two. The five steps are danced in four beats so that it becomes “One, two, cha, cha, cha.”
- **Foxtrot** - This dance, also called the Slow Foxtrot, was named for its creator, Harry Fox. According to legend, Harry developed the dance while performing in Vaudeville and practicing on rooftops. In 1914, Vernon and Irene Castle brought the dance popularity as they performed it. By the 1940s, the Foxtrot became America's most popular fast dance. The dance is in 4/4 time with a syncopated rhythm. Most of the steps of the dance are walking steps, side steps, and quarter turns.

- **Jive** - This happy dance involves a lot of knee-lifting and hip-rocking. It requires a lot of kicks and controlled flicks by the dancers. It originated in the United States in the 1940s and consisted of two triple steps and one rock step.
- **Mambo** - This dance is highly energetic and has a contagious rhythm. It originated in Cuba as a combination of Afro-Caribbean and Latin American dance. It is based on forward and backward movements with exaggerated hip movements and long, sharp, quick steps in a 4/4 beat. The beats are counted as “quick-quick-slow.” The feet move on the second beat, shift to the other foot on the third beat, and return to the original position on the fourth.
- **Rumba** – This dance is a love story between the two dance partners. It is slow and romantic. It originated in Cuba and was introduced to the United States in the 1920s. Distinctive hip movements are important parts of the dance. The dancers sway by bending and straightening their knees. It is performed in 4/4 time, and sometimes the music is enriched with kitchen instruments like pots, pans, and spoons.
- **Samba** – The samba is a dance of happiness and joy and is Brazil's national dance. It originated in Brazil in the 19th century but didn't become a ballroom dance until 1930. Initially, it was danced solo at the Carnival celebrations in Brazil. There are rapid steps, swaying, and flowing motions by the dancers as they dance.

2. **Folk Dance** - These dances were originally called peasant dances since they originated among the peasant civilizations of Europe. Folk dances around the world share common formations and movement styles. Examples of folk dances include the *Maypole Dance* of England, in which the dancers weave an intricate pattern of ribbons as they dance around a pole placed in the center of the dance area.

- The earliest and simplest formation is the *closed circle*. In this formation, the dancers form a circle around an object of worship. The dancers grab each other's hands and wrists and face the circle's center as they move in and out.
- Another formation is the *chain*. In this dance formation, the dancers form a long line, holding hands or handkerchiefs. The leader traces a pattern through the dance area (even through the entire village), and the other dancers follow in the procession.
- **Belly Dance** – oriental folk dance – an expressive form of dance that originated in Egypt – emphasizes complex movement of the torso and entire body utilizing sudden percussive movements, unstopping fluid body motions, and the presence of small and fast shimmies, shivers, and vibrations of the hips or the ribcage

3. Social Dance – These dances are non-competitive and are relaxed and informal. Generally, social dances are danced for enjoyment and entertainment. They are designed for participation rather than performance. Weddings, business functions, informal gatherings, school dances, and nightclubs are the usual venues for social dances. Examples of social dances include:

- **Lindy Hop** – evolved from Charleston – often described as the original swing dance – relies on improvisation of dancers – a very athletic form of partner dance – named for Lindbergh
- **Charleston** – social jazz dance popular in the 1920s – characterized by toes-in, heels-out twisting steps – usually performed as single or as a partner dance
- **Country Swing** – popular American partner dance which combines rapid swing moves with dips and lifts
- **Bunny Hop** – a novelty dance created in Balboa High School in 1952 – sometimes called a “dance party” dance – dancers form in a variation of the Conga line, holding on to the hips or shoulders of the person in front of them – they tap floor two times with left foot, then with the right foot, then hop forward, backward, and finally three hops forward to start the sequence again
- **Pony** - a prancing triple step on alternating feet and mostly in place – 1960s novelty dance – dancers travel around the room changing partners as they go – originally set to “Pony Time” by the Goodtimers in 1960
- **Swim** – 1960s dance that originated from Bobby Freeman’s Song, “C’mon and Swim” – dancers move to the beat of the music while using hands and arms as if swimming in water
- **Twist** – dance inspired by Rock and Roll music – originated in the late 1950s and early 1960s – Chubby Checker’s version of the song “The Twist” – dancers perform the dance by twisting their bodies while sometimes lifting one leg
- **Hitchhiker** – simple dance using thumbs up sign as if trying to “hitch” a ride – originated in the 1960s
- **Electric Slide** – a type of line dance in which people dance along to a sequence of steps while arranged in lines – usually danced to “Electric Boogie” by Marcia Griffiths – includes hand claps, finger snaps, and silly poses

4. Performance Dance

- **Ballet** - one of the most highly technical and famous of all performance dances. It was created in 15th-century Renaissance Italy but received popularization in countries such as France and Russia.
- **Tap Dance** – does not focus on body movements and dancing with a partner - is characterized by the creation of percussion-like musically-focused rhythm performance using tap shoes striking on the floor in accordance with the dancing music
- **Contemporary Dance** - a highly complicated type of modern performance dance that originated in the mid-20th century as an alternative to classical dance styles (such as ballet), modern styles (free dance), and jazz dance - focuses on free leg movement, strong stress on the torso, disordered choreography, unpredictability, multiple and simultaneous actions, improvisation, and non-standardized costumes
- **Modern Dance** - performance dance that originated as a reaction against classical ballet and its movement style - evolved into a popular free dance style that includes elements of performance art, release technique, improvisation, and contact improvisation
- **Concert Dance** – (also known as stage dance) is any choreographed dance that is performed for an audience, usually at the theatre or an organized gathering setting with the presence of set music

C. Appropriate Dancewear

Appropriate dancewear depends on the type of dance.

For example, contemporary dance requires clothing that allows for a broad range of movements. It should be tight-fitting but not restrictive. Usually, contemporary dance requires bare feet or dance socks.

Hip-hop dance requires loose-fitting clothing (i.e., sweats, t-shirts, and sneakers with less grip on the soles).

Ballet requires special shoes (slippers or pointe), depending on the ballet style. Leotards, tights, ballet skirts, and dance shorts are excellent practice attire. Performance may include specially designed tutus that can be of various lengths.

Jazz dance requires attire similar to contemporary dance with tight-fitting clothing. Jazz dancers either dance barefooted or with special jazz shoes that are soft leather with flexible soles.

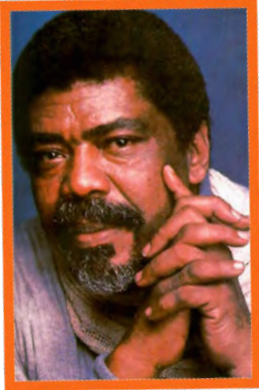

Tap dance requires special shoes equipped with metal taps attached to the heels and toes. Usually, tap shoes have at least a slight heel, while ladies' tap shoes typically have a higher heel with straps across the top.

Rudolf Nureyev (1938 – 1993) 	Soviet-born ballet dancer famous for his suspended leaps and fast turns – Born on a train in Siberia – In trouble with KGB Danced with Kirov Ballet (Mariinsky Ballet) – Defected to France in 1961 in what was called “leap to freedom” – Danced with Dame Margot Fonteyne in Royal Ballet in London – Became naturalized Austrian	Favorite partner of Dame Margot Fonteyne – roles danced with her • <i>Giselle (The Fairy Doll)</i> • <i>Marguerite and Armand</i> • <i>Swan Lake</i> His choreographed works: • <i>Manfred</i> (1979) • <i>The Nutcracker</i> (1980) • <i>Romeo and Juliet</i> – (1981) Fonteyne was Lady Capulet <i>Quixote</i> – (1973) film which he co-directed and starred

Anna Pavlova (1881 – 1931) 	Russian prima ballerina and choreographer – Born as a peasant in St. Petersburg – Accepted at St. Petersburg Imperial Ballet School taught by Petipa - Designed modern pointe shoes with Capezio – Formed dance school in 1911 – Founded a home for Russian orphans in 1920 – Partner with Nijinsky – Died in The Netherlands after a train wreck, where she caught pneumonia from the cold	<i>The Dying Swan</i> (1905) – choreographed by Fokine with music by Saint-Saens – became her signature role (Note: Picture is of this role.) <i>Giselle</i> (<i>The Fairy Doll</i>) (1907)
Paul Taylor (1930 – 2018) 	American choreographer and modern dancer – Born in Pennsylvania – Studied dance at Juilliard with Martha Graham – Martha Graham called him the “Naughty boy of dance.” Some of his movements are designed to resemble insects His dance company usually consisted of only 13 dancers Quit performing in the 1970s	<i>Episodes</i> - (1959) role created for him by Balanchine and Graham to music by Anton Webern <i>Duet</i> - (1957) – avant-garde work in which he and his partner remained motionless for 4 minutes <i>Orbs</i> - (1966) – hour-long dance to Beethoven’s last string quartets

Bill Robinson (1878 – 1949) “Bojangles” 	African American tap dancer Born in Richmond, Virginia Started dancing when he was 6 – Choreographed the Stair Dance – Danced in shoes with wooden soles and heels – Did not dance for white audiences until his 50s – Starred in many roles with Shirley Temple – Dancing called “music of raindrops on a tin roof”	Movies with Shirley Temple: • <i>The Little Rebel</i> - 1st movie with Temple • <i>The Little Colonel</i> – choreographed Stair dance for the movie
Ginger Rogers (1911 -1995) 	American dancer – Born Virginia Katherine McMath in Missouri – Made 73 movies, 10 with Fred Astaire – Kidnapped by her father twice – Appeared in Vaudeville – Hired by the Gershwin brothers to star in <i>Girl Crazy</i>, where Fred Astaire helped with the choreography	<i>Girl Crazy</i> (1930) – Gershwin musical where Fred Astaire taught choreography to the dancers <i>Flying Down to Rio</i> – (1933) – the first film with Astaire

Marie Taglioni (1804 – 1884) 	Italian ballet dancer – Romantic style of dance – Trained by her father Filippo Taglioni – First woman to dance on points of toes	<i>La Sylphide</i> – (1832) created for her by her father – with a diaphanous muslin costume designed by Lami (prototype of a tutu) – the first of <i>Ballets Blancs</i> or white ballets
Twyla Tharp (1941 -) 	American dancer and choreographer – Born in Indiana and named after the Pig Princess of the fair - Worked in her parents' drive-in theater – Formed Twyla Tharp Dance (1965) – Her dances combine classical, jazz, and contemporary pop music – Won 2 Emmy Awards and a Tony Award – Choreographed more than 160 works	<i>Tank Drive</i> – (1965) – her first dance – at Hunter College Art Dept. – music by Petula Clark <i>Deuce Coup</i> – (1973) - 1st crossover ballet – used Beach Boys music – choreographed for Joffrey Ballet <i>Push Comes to Shove</i> – (1976) - crossover ballet choreographed featuring Baryshnikov – commissioned by American Ballet Theatre <i>The Princess and the Goblin</i> – (2012) - 1st ballet for children <i>Movin' Out</i> – (2003) - jukebox musical about the songs of Billy Joel – won Tony Award <i>Hair</i> – (1979) used her experience with site-specific choreography to choreograph the musical <i>Amadeus</i> (1984) – choreographed and directed opera sections of the movie

CATEGORY 7

Drama: Elements, Production, and Performance, Age- appropriate Broadway Plays

VII. Drama: Elements, Production, and Performance, Age-Appropriate Broadway Plays

A. Elements

Drama is defined as a work presented on stage by a troupe of actors. The story comes to life through the actors' performances. The audience is free to interpret what is happening by watching the performers and their presentations.

Aristotle said that the main elements of drama were plot (fable), character, thought, diction, spectacle, and song (melody). Of these elements, he considered the plot the most important. He considered character the second most important element, with the other elements following in varying levels of importance.

Element	Definition
Plot (Fable)	Aristotle's most important element - Sequence of events that are connected – not necessarily the narration of what happened but rather the cause and effect of different things within the drama
Character	Aristotle's second-most important element - Instruments that unfold the plot – can be humans, animals, ghosts, or even inanimate objects
Protagonist	Leading character or one of the major characters in a drama
Antagonist	The character who opposes the main character
Thought (Theme)	Aristotle's third most important element - The idea of the drama supported by the unfolding of the plot by the characters
Diction	Aristotle's fourth most important element - The words, style, and dialects used by the characters – the script of the drama
Spectacle	Aristotle's sixth most important element - Visual impact – the feeling of participation in large, grand events – can include costumes, makeup, scenery, lights, etc.
Song (melody)	Aristotle's fifth most important element - Anything the audience hears from the stage – can include words, music, background score, sound effects, silences, pauses, etc.
Unity of Action	One of the basic elements of tragedy as defined by Aristotle – requires that the events of a tragedy have a logical beginning, middle, and end
Unity of Time	One of the basic elements of tragedy as defined by Aristotle – a limited amount of time that takes a play to be performed on a stage – in Greek plays, one day
Unity of Place	A single place where all events of the tragedy take place

Action	Propelling the plot from one moment to the next – relates to the structure of the play
Audience	The watchers of the play - Must exist for a play to be considered a performance – otherwise, it would only be a rehearsal
Climax	Ultimate crisis in a plot – the highest peak, usually occurring near the end of the play
Conflict	Often embedded in the play from the beginning with characters destined to clash with one another - can be verbal, non-verbal, or physical
Contrast	A point of difference – can be between scenes, characters, settings, language, relationships, etc.
Energy	The intensity of a character's actions
Mood/Atmosphere	Feeling or tone of the performance
Movement	Act of a performer moving in the drama according to the character's motivation, surroundings, and interaction with other characters
Posture	Position in which the character holds the body
Setting	Location of a scene, play, or musical
Theme	The central idea of the play or what the play means explicitly based on the actions within the plot
Time	Can range from moments to eras
Fourth Wall	The imaginary wall between the audience and the actors in a drama

B. Forms/Types of Drama

Form/Type of Drama	Description
Tragedy	Serious play that ends on a sad note – may result in the death of the protagonist or main character – usually involves the downfall of the main character
Farce	Comedy to entertain the audience through highly exaggerated and improbable events – usually contains slapstick gags and nonsensical storyline
Tragicomedy	Play that contains the elements of both tragedy and comedy
Mask Drama	Play performed by actors wearing masks over their faces as disguises to conceal or hide their identities
Comedy	Funny and humorous play that ends on a happy note – aimed at evoking laughter from the audience
Melodrama	Play interspersed with songs and orchestral music either following or accompanying the action – contains such stock characters as heroes and villains, a helpless heroine or mentors who react to situations in exaggerated ways

Mime	Performance in which characters tell a story without words using actions only
Opera	Dramas in which characters sing each line rather than speaking – entire production set to a musical score
Musical Drama	Periods of storyline interrupted by songs, lots of singing and dancing to progress the plot
Miracle Play (Saint's Play)	Drama of the Middle Ages that presents a real or fictional account of the life, miracles, or martyrdom of a saint
Mystery Play	Drama of the Middle Ages that represented biblical characters and depicted such stories as The Creation, Adam and Eve, the Last Judgment
Passion Play	Drama and religious performances representing Christ's passion from the Last Supper to the Crucifixion
Morality Play	Allegorical drama of the Middle Ages in which the characters personify moral qualities or abstractions in which moral lessons are taught – <i>Everyman</i> is an example
Improvisation	The playing of dramatic scenes without written dialogue and with minimal or no predetermined dramatic activity

C. Concepts

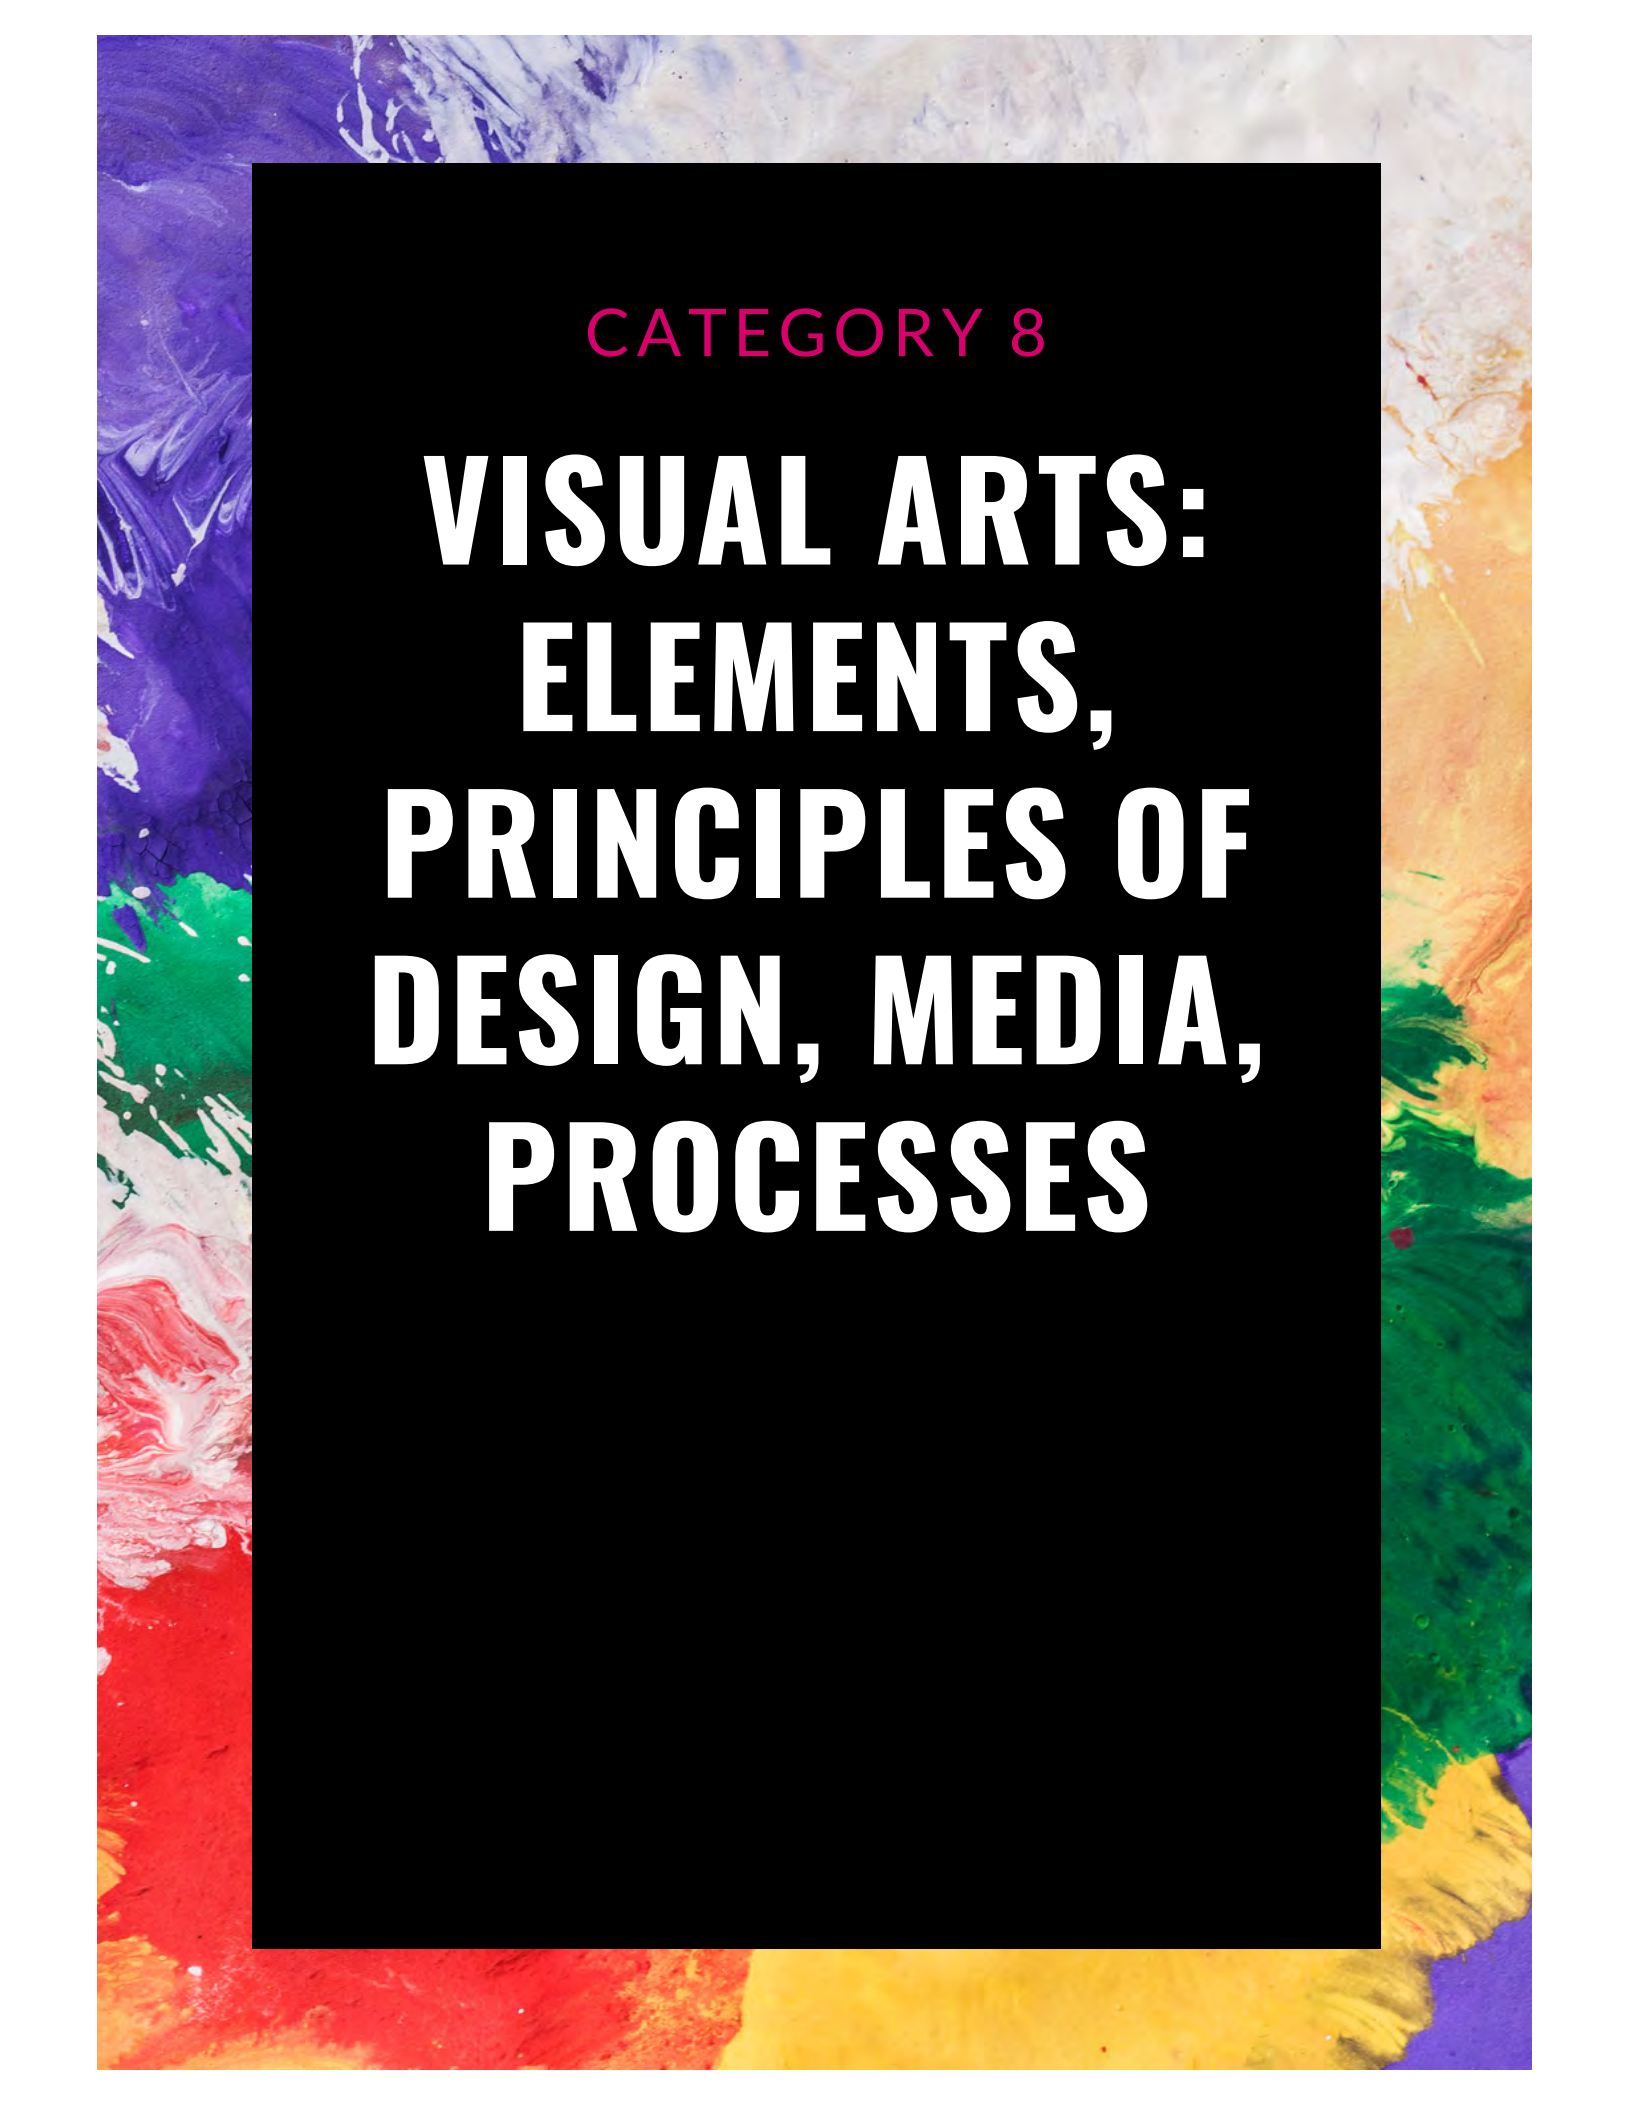

Concepts and Terms	Interpretation
Tragic Hero	Type of character in a tragedy - usually the protagonist who is virtuous, flawed, and suffers a reversal of fortune within the play
Plot Structure	Sequence of events in a drama that consists of exposition, rising action, climax, falling action, and resolution or denouement
Exposition	Beginning of the story - introduces the conflict, the characters, and the setting
Rising Action	Events before the climax in which the character may try to solve the problem but fails
Climax	The turning point or point of greatest suspense or action in the play
Falling Action	Action or events that occur after the climax
Resolution	End of the drama where all conflicts or problems are solved
Denouement	The final resolution or clarification of a dramatic plot – comes from the French meaning “unknotting” – The simplest cliched example is “And they lived happily ever after.”
Hamartia	Fatal flaw leading to the downfall of a tragic hero or heroine
Anagnorisis	Point in a play in which the protagonist recognizes or discovers another character's true identity or true nature

Catharsis	Means purging or cleansing – an emotional experience caused by seeing a play and the intense emotional experience that results in a feeling of relief afterward
Dialogue	Conversation between two or more people in a drama
Noh Theatre	Japanese drama - Oldest theater tradition in the world - means skill or talent – combines poetry, music, and dance in highly stylized manner with costumes that purposefully resemble samurai outfits – elaborate masks are part of costumes
Kyogen	Japanese drama - Comic intermissions performed between Noh acts to lighten the mood of the audience
Kabuki	Japanese drama - highly stylized song, mime, and dance performed only by male actors using exaggerated gestures and body movements to express emotions
Bunraku	Japanese puppet theater, where giant puppets are manipulated on stage with puppeteers dressed in black
Hubris	Excessive pride or self-confidence
Prologue	Brief introduction to the play delivered by one or more of the play's characters before the play begins – the Stage Manager in <i>Our Town</i> serves this purpose
Scene	Small sections of the play within the acts that change when the setting changes or the focus changes to a different set of characters
Act	Large division or section of a play that contains the main action of the play
Epilogue	Short conclusion of the play that occurs after the main action of the play has ended – an actor might ask for applause, wrap up the story, or apologize for any offense that was taken – An example would be Puck in <i>A Midsummer Night's Dream</i>

D. Age -Appropriate Broadway Plays

Play, Playwright, & Characters	Plot and Information
<i>Harry Potter and the Cursed Child</i> Playwright(s) – Jack Thorne, Tiffany & J.K. Rowling Characters: • Harry & Ginny Potter • Albus Severus • Rose	Won Tony for Best Play 2018 Based on J.K. Rowling’s stories The story takes place nearly 20 years after <i>Harry Potter and the Deadly Hallows</i> - The story of Harry’s son and the dark path he is taking
<i>Harvey</i> Playwright – Mary Chase Characters: • Harvey, a 6-foot rabbit • Elwood P. Dowd	Won Pulitzer in 1945 Comedy about a pooka, Harvey – the 6-foot rabbit that only Elwood can see – Elwood travels around town talking with the rabbit – Elwood’s sister tries to have him committed to an insane asylum, but the tables are turned as the doctors believe his sister is the one needing help
<i>War Horse</i> Playwright: Nick Stafford Characters: • Joey (War Horse) • Albert • Topthorn (another horse)	Won Tony Award in 2011 for Best Play Based on a novel by Michael Morpurgo It tells the story of a boy who wins a horse (Joey) by winning a bet that he can train the horse to be a plow horse within 1 week – when WWI breaks out, his father sells Joey to the cavalry – the horse is used in the war as a cavalry mount, is captured and used to pull the ambulance
<i>The Lion King</i> Composer: Elton John Lyrics: Tim Rice Characters: • Scar • Rafiki • Mufasa • Young Simba • Nala • Simba • Timon • Pumbaa	Based on the Disney film Won Tony for Best Musical + 5 other Tony Awards Julie Taymor won Best Director Tony – 1st woman winner Actors and puppets make up characters. 3rd longest-running musical in Broadway history It tells the story of a young lion cub who grows into adulthood and assumes the leadership of his pride
<i>The Phantom of the Opera</i>	Longest running show in Broadway history

Composer: Andrew Lloyd Webber Characters: • Erik (the Phantom) • Christine Daae (beautiful soprano) • Raoul de Chagny (friend and fiancé of Christine)	Won 7 Tony Awards, including Best Musical Based on the 1910 French novel Gaston Leroux It tells story of a beautiful soprano, Christine, who becomes the obsession of the masked phantom who lives in the theater.
<i>Hamilton</i> Composer: Lin-Manuel Miranda Characters: • Alexander Hamilton • Aaron Burr • Eliza Hamilton • George Washington • Lafayette • Thomas Jefferson • King George III	Won 11 Tony Awards, including Best Musical Won the 2016 Pulitzer Prize for Drama Based on a book by Ron Chernow It tells the story of the American founding father, Alexander Hamilton, in two acts.
<i>Aladdin</i> Composer: Alan Menken Characters: • Aladdin • Genie • Jasmine • Jafar • Iago • Sultan	Set in Agrabah Based on the 1992 Disney film Princess Jasmine’s father wants to find her a husband – She meets Aladdin and falls in love with him – Jafar (the villain and right-hand man of the Sultan) orders Aladdin to open the thieves’ cave and bring him a magical lamp
<i>Wicked</i> Composer: Stephen Schwartz Characters: • Elphaba • Glinda • Wonderful Wizard of Oz • Doctor Dillamond	Based on L. Frank Baum’s <i>Wonderful Wizard of Oz</i> and Gregory Maguire’s <i>Wicked: The Life and Times of the Wicked Witch of the West</i> Story told from perspectives of the witches of Oz – begins before Dorothy arrives in Oz

CATEGORY 8

**VISUAL ARTS:
ELEMENTS,
PRINCIPLES OF
DESIGN, MEDIA,
PROCESSES**

VIII. Visual Arts: Elements, Principles of Design, Media, Processes

A. Elements of Visual Art:

There are seven primary elements of art (line, shape, form, space, color, value, texture), the components from which any artwork can be built. Any artwork that can stand the test of time will contain these elements.

Element 1 – Line

Line is the most fundamental concept in art. This element leads the viewer's eye around the artwork, communicating the piece's meaning to the viewer. Without this element, none of the other elements could exist. At its most basic foundation, a line is simply a moving dot. When these dots overlap, the line is solid. When they do not overlap, the line is dotted or dashed. These “incomplete” lines can represent movement or hidden material behind the primary figure. Repeated lines create patterns, and these patterned lines create a rhythm for the work.

Lines can be:

- Curved
- Zigzag
- Horizontal
- Vertical
- Diagonal

Horizontal Lines – like curved lines, these lines emphasize quiet and create stability. Landscapes are excellent examples of horizontal lines. In *The Poppy Field* by Monet (1873), the horizon and the trees lined across the field of overgrown poppies create the tranquility that such rural landscapes are designed to produce.

Vertical Lines – give the impression of height and strength. These lines are pointing upward, providing a spiritual connotation to the work. These perpendicular lines extend upwards to the sky, causing the viewer to become enthralled with the possibilities of a spiritual reality. Grant Wood's *American Gothic* (1930) is an excellent example of vertical lines. Note how the vertical lines of the two subjects and the pitchfork lead the viewer's eyes to the top of the painting, where a window shaped like a stained glass cathedral window points even higher.

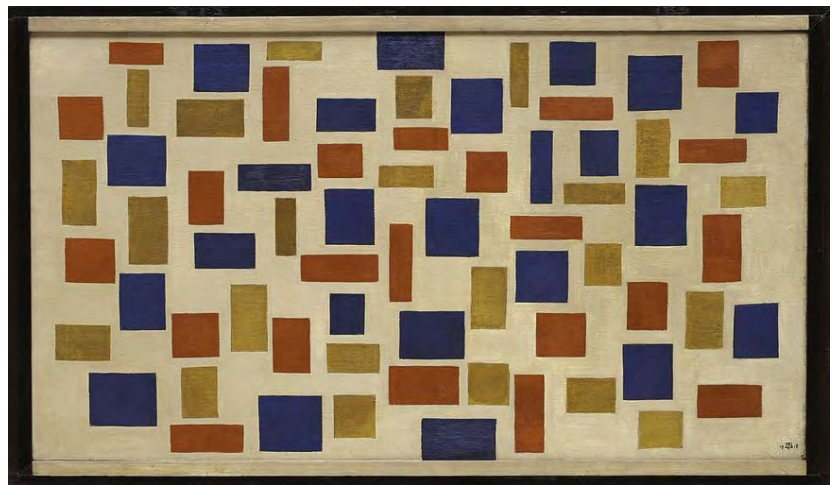

Element 2 – Shape

As previously stated, the most basic Element of Art is the line. However, when the line encloses a space, a shape is formed. Thus, shape becomes the second Element of Art. By definition, in art, a shape is an enclosed two-dimensional space with length and width. The impression of three-dimensionality can be achieved through highlights and shadows. Finally, a shape can be differentiated by the medium with which it is produced or the artist's use of value, color, or texture. The use of positive and negative space can also be used to create shape in art.

Shapes can be:

- Geometric/Inorganic
- Organic
- Positive
- Negative

Geometric Shapes – These shapes are mathematically defined and have familiar names like square, circle, and triangle. Their boundaries are well-defined, including the canvas itself, which is rectangular. This rectangle encloses the art within the confines of the material on which it is

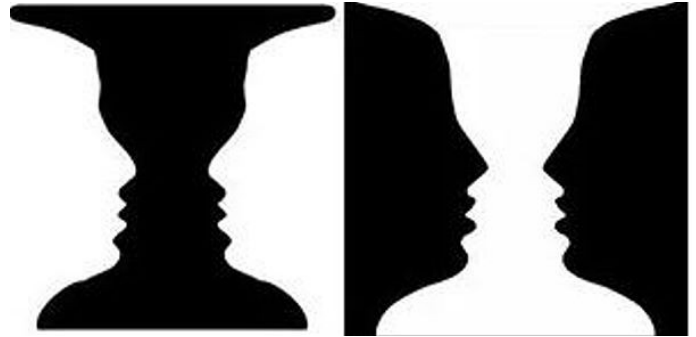

created. Look at Mondrian's *Composition II in Red, Blue, and Yellow* (1930) and Doesburg's *Composition XI* (1918).

Organic Shapes – These shapes are less defined and represent shapes in nature. These shapes resemble or suggest the forms of living organisms. A well-defined leaf or the impression of a rain cloud can be called an organic shape. A prime example of organic shapes can be seen in many of Georgia O'Keeffe's paintings, including *Cow's Skull: Red, White, and Blue* (1931). The subject of the image itself is the remains of a living creature, thus an organic shape.

Positive Shape – In art, the object drawn or painted is a positive shape. It is the focus of the artwork or the actual thing being drawn. **Negative Shape** – The negative shape of an artwork is the area (or areas) between the objects in the piece. While positive and negative shapes are two separate entities, they combine to create the atmosphere of the overall composition. Sometimes the contrast between positive and negative shapes is very stark.

In the illustration below, it is difficult to determine the positive and the negative space. The artist's intent determines these spaces.

Element 3 – Form

As you move from shape to the next level, depth is added to length and width. This three-dimensional aspect creates form, the third

Element of Art. Think about a square vs. a cube or a circle vs. a sphere. The cube and the sphere have depth, thus, creating a form instead of a simple shape.

Artists use shading and color to create the illusion of form and fool the viewer into seeing what is not there.

Element 4 – Space

Space in art is the part of a painting that can be found between, around, and/or within an object. Artists use various techniques to create the illusion of space.

Techniques to create space:

- Overlapping
- Placement
- Size
- Detail
- Color and Value
- Perspective
- Negative Space

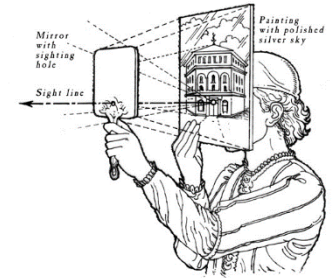

Types of Space

- Perspective
- Positive and Negative Space
- Deep Space
- Shallow Space

Perspective – Perspective can be used to create the illusion of space in art. Several types of perspectives enable the artist to make realistic, natural representations of objects in two dimensions so that they appear three-dimensional. When we consider perspective, we are talking

about *linear perspective*. When using a linear perspective, things in the distance appear foggy. *Aerial perspective*, also called atmospheric perspective, is also used to create space. Think about a mountain range in the distance. It appears hazy and blue when viewing it. Similarly, aerial perspective creates this phenomenon by using lighter blues with softer edges and fewer details.

Linear Perspective – The Italian architect, Brunelleschi, developed linear perspective during the Renaissance. He painted several buildings using a mirror. When he did so, he realized that the buildings ended at the horizon when he painted the lines from the building's outline.

The lines of linear perspective include a horizontal line, vanishing points, and the lines that recede to the vanishing points.

Element 5 – Color

Artists use color to show and describe the subject. Mood, light, depth, and point of view can be revealed through the artist's use of color. Color theory has changed throughout history, displaying different guidelines for mixing and manipulating the color spectrum.

Sir Isaac Newton developed the first color wheel in his 1704 book *Optiks*. Newton's color wheel contained seven colors – red, orange, yellow, green, blue, indigo, and violet – the colors of the rainbow. Then in 1810, Goethe developed a similar color wheel that contained only six colors – eliminating indigo from Newton's wheel. Goethe's wheel is more similar to the wheel used today. This Element of Art has three properties: hue, value, and intensity.

Hue – the color as distinguished from any other color. This property includes the names assigned to the colors, such as red, green, or purple.

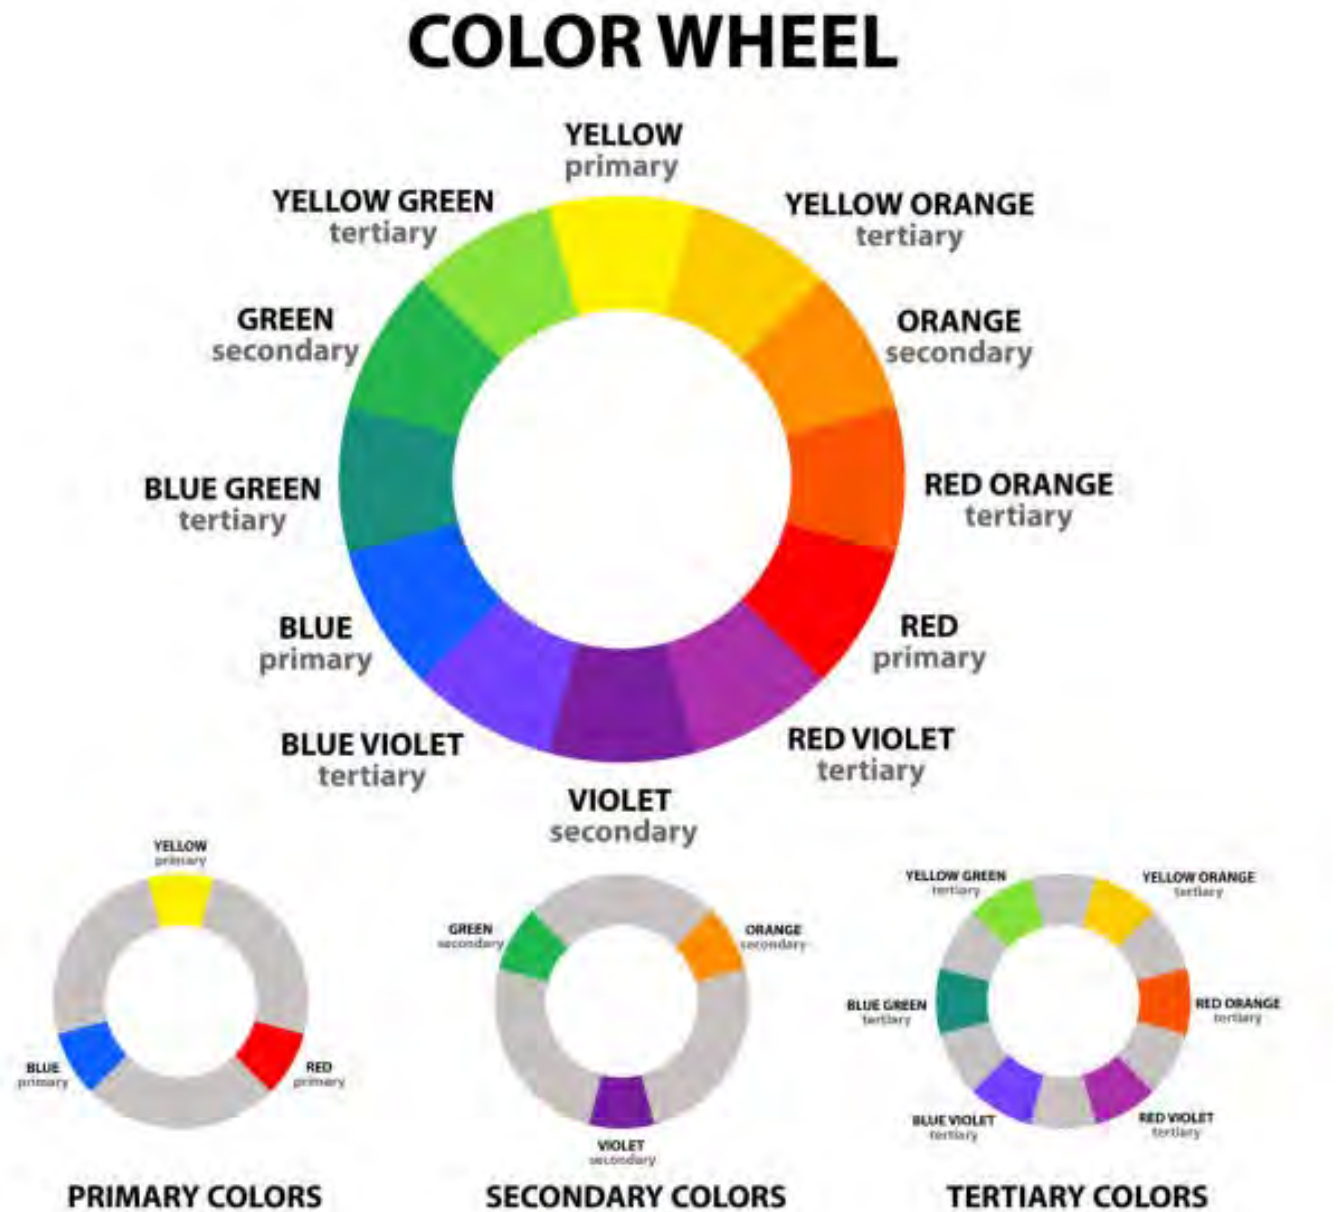

Value – represents the shade of lightness the hue possesses. Color value is often represented on a chart from light to dark. When white is mixed with a hue, the result is a lighter value called a *tint*. When black is mixed with the hue, the value is darker and is called a *shade*.

Intensity – the brightness or dullness of a hue. On the color wheel, the hues are at full intensity or brightness, but by mixing the hue with gray, black, or white, the color value changes and becomes dull. The intensity can also be changed when colors are mixed with their complement (the opposite color on the wheel). This means that the higher the saturation or intensity, the purer the hue.

Color Wheel – a circular diagram showing colors and their relationships to other colors on the wheel. The color wheel can be used to identify the following:

- **Primary Colors** – 3 colors - red, yellow, blue
- **Secondary Colors** – 3 colors - the result of mixing equal amounts of two primary colors – (commonly, green, orange, and purple)
- **Complimentary Colors** – colors found opposite each other on the color wheel

- **Analogous Colors** – colors located beside each other on the color wheel – the three

colors in each set share a common hue, so they appear to match or go together

- **Warm Colors** – reds, oranges, and yellows
- **Cool Colors** – blues, greens, and purples
- **Neutral Colors** – blacks, grays, whites, and shades of beige

Element 6 – Value

By utilizing different colors and lightness or darkness of colors, artists can create the illusion of light in the work. Additionally, value is used to create texture in art.

Element 7 – Texture

This element refers to how an object in an artwork feels to the touch or *looks* as though it would feel. The two main texture types include visual texture in two-dimensional art and physical texture in three-dimensional art. Texture can create depth in the artwork. It can also enhance the piece's qualities, like rhythm, movement, or emphasis.

Visual Texture – leaves an impression of the way the picture should feel. Visual texture can be achieved with various paint application methods, such as with paintbrushes, palette knives, or sponges. Additionally, the type of paint the artist uses creates different effects and textures. The surface that is painted creates a different idea of texture. Finally, different painting techniques, like *impasto* and *sfumato*, can change the work's texture. Visual texture can also be created in drawing through *cross-hatching*, *hatching*, and *shading*.

Impasto – a painting technique in which thick paint is built up on a surface to create texture in a painting – Impasto was first noticeable in the paintings of the Renaissance artists such as Titian and Tintoretto. Rembrandt also used impasto.

Sfumato – a painting technique that softens the transition between colors. This technique mimics the way the eye sees colors in areas where it is not focusing. Of all the painting techniques, sfumato can be described as the main focus of Renaissance artists like Leonardo. Da Vinci's *Mona Lisa*.

Cross-hatching/hatching – linear drawing techniques often used together – Various drawing

media are used to create these techniques. Additionally, they can be found in prints made through etchings and engravings. Hatching uses non-crossing lines to create texture. Lines closer together create darker areas, while lines further apart reveal the light source. Artists will cross the lines in the technique called cross-hatching. Albrecht Durer used hatching and cross-hatching to create many of his works, including *Melencolia I* (1514).

Shading – a drawing technique that adds value to create the illusion of form, space, and light. Shading can make a picture appear three-dimensional.

CATEGORY 9

**VISUAL ARTS:
PURPOSES, STYLES,
SUBJECT MATTER,
HISTORICAL ASPECTS**

IX. Visual Arts: Purposes, Styles, Subject Matter, Historical Aspects

A. Purpose of Visual Art

The purpose of visual art is to stimulate visual imagination. He claims Duchamp's *Fountain* is *conceptual art*. It is not something that has not been seen before, but its conception as an artwork makes it something to "think about" – not something to *see* or *visualize*. Visual art should be something to *see* in a different light to stimulate the viewer's visual imagination.

Besides stimulating the imagination, visual art can:

- Be used to make money
- Bring about social change
- Change ideas and impressions of art
- Self-Expression or gratification
- Physical functions – like pottery or furniture
- Depict social conditions – usually in the form of photography
- Maintenance of a species or culture

Art can be viewed as the result of one or more of these functions:

- The context in which it was created
- Personal views of the artist
- Social effects and contexts
- Physical functions

B. **Visual Art Terms** - These definitions have been modified from the following website:

<https://education.ket.org/resources/visual-arts-glossary/>

Abstract art	Art in which the subjects have been changed or modified so they are not recognizable as a realistic entity – abstract art begins with a recognizable object as its origin - (Artists include Kandinsky, Rothko, Willem de Kooning, Pollock, and Mondrian)
Abstract Expressionism	Art movement of the 1940s and '50s – paint is applied to large canvases for emotional expression – does not focus on realistic subjects – (Artists include Pollock, Still, Frankenthaler, Willem de Kooning, Kandinsky, Mondrian, Rothko)

Acrylic paint	Water-based paint with a polymer binder (Famous acrylic paintings – <i>Campbell’s Soup Cans</i> by Warhol; <i>Drowning Girl</i> - Lichtenstein; <i>Canyon</i> – Frankenthaler; <i>Elegy to the Spanish Republic No. 110</i> – Motherwell; <i>White Center (Yellow, Pink and Lavender on Rose)</i> – Rothko)
Analogous Colors	Colors next to each other on the color wheel
Architecture	A 3D art form that involves designing buildings, bridges, cities, landscapes, etc.
Armature	Framework on which a sculpture is molded with clay or other material
Asymmetrical	Organization of objects in the artwork so that one side differs from the other side
Background	Part of a picture that appears farthest from the viewer
Balance	Principle of design that refers to the equalization of elements in an artwork 1. Asymmetrical balance; 2. Symmetrical balance; 3. Radial balance
Baroque	Art period from ~1600 – 1750 – began in Rome as part of the Counter-Reformation – included art and music – takes its name from the Portuguese term meaning “misshapen” or “broken” pearl – <i>Palace of Versailles</i> , an excellent example of Baroque architecture – (Baroque artists – Caravaggio, Bernini, Rubens, Velazquez, Van Dyck, Poussin, Castiglioni, Vermeer)
Batik	Method of dyeing cloth that originated in Indonesia – uses fabric coated with wax
Binder	Material that holds together colored pigments to form paint – can be egg yolk or animal glue
Byzantine Art	Art style from Middle Ages (500 – 1450) – associated with Eastern Roman Empire – uses rich colors and Christian icons
Calligraphy	Decorative handwriting created with quill, pen, or brush
Canvas	Cloth tightly stretched across a wooden frame to create a painting surface
Capital	Top of a column – determines the type of column in Greek architecture (i.e., <i>Doric, Ionic, Corinthian</i>)
Ceremonial Art	Art created to commemorate a special event or the life of a person - it is used as part of rituals or celebrations
Charcoal	Compressed burnt wood used for drawing
Chiaroscuro	Treatment of light and shade in drawing and painting – comes from Italian <i>chiaro</i> (light) and <i>scuro</i> (dark) (Artists employing chiaroscuro – Caravaggio, Rembrandt, Rubens, and Velazquez) – Caravaggio used it most dramatically in the form called <i>tenebrism</i> .

Collage	Term coined by Georges Braque and Pablo Picasso - Artwork made by gluing pieces of paper to a flat surface – Comes from French <i>coller</i> (gluing) (Famous collages – <i>Still Life with Chair Caning</i> by Picasso; <i>Fruit Dish and Glass</i> by Braque – 1 st collage)
Contrast	Design principle that emphasizes differences between the art elements
Cool Colors	Blues, violets, and greens – appear to recede into space
Crayon	Wax stick containing pigment
Cubism	Art movement of 1910 – the 1920s -artists attempted to show all three dimensions in a flat plane – the subject matter is disassembled and reassembled in abstract form – Primarily created by Picasso and Braque – <i>Les Demoiselles d’Avignon</i> by Picasso is a prime example of this art form – Two types of cubism: 1. <i>Analytical Cubism</i> 2. <i>Synthetic Cubism</i>
Depth	Dimension within a work of art or the illusion of the dimension showing distance
Design	The plan, organization, and arrangement of the elements in an artwork
Digital Art	Art in electronic form – the practice of creating and presenting art using technology – also called <i>computer art</i> or <i>multi-media art</i> – depends on computer-based digital encoding, storage, and processing of information in various formats – first digital artwork piece created in 1952 by Ben Laposky called <i>Oscillon 40</i>
Dome	Hemispherical ceiling over a circular architectural opening – earliest masonry dome was the <i>Pantheon</i> in 126 A.D.
Drawing	Two-dimensional artwork made with a dry medium such as pencil, charcoal, or crayon – Famous drawing artists: Leonardo da Vinci, Durer, Michelangelo, Van Gogh, Degas, Rubens, Picasso, Delacroix, Matisse
Embroidery	Decorating fabric with stitches made from thread – Types of embroidery: <i>Chikankari</i> (India), <i>Katha</i> or <i>sashiko</i> (Japanese), <i>Brazilian Dimensional Embroidery</i>
Emphasis	Principle of design concerned with dominance – the main idea is created as the <i>focal point</i>
Encaustic	Painting technique using pigments dissolved in hot wax – <i>Flag</i> (1954) & <i>Target with Four Faces</i> (1955) (Jasper Johns) – Most famous encaustic paintings are <i>Fayum Funeral Portraits</i> (1 st Century A.D.)
Engraving	Printing method in which image is cut into metal or other material with a <i>burin</i> and surface is inked to make a print – Types of engraving: 1. Convex engraving 2. Flat engraving 3. Intaglio
En Plein air	Painting out of doors – especially related to impressionism

Etching	Printing method in which metal plate is placed in acid to create the lines of the image – then print made from the inked plate – Famous etchings: <i>Knight, Death, and the Devil</i> (Durer); <i>Hundred Gilder Print</i> (Rembrandt)
Expressionism	Term coined by Antonin Matejcek in 1910 as the opposite of impressionism - Art style between realism and abstract art in which the artist strives to capture the artist's emotional or intellectual response to a real-world object without capturing the object itself – range of works include exaggerated views of real-life objects to abstract forms Famous artists: Munch, Kandinsky, Klee, Mondrian, Chagall, Modigliani
Façade	Front or <i>face</i> of a building
Focal Point	Area in a composition at which the emphasis is the strongest and where the viewer's eye continually focuses – also called the center of interest
Folk Art	Predominantly functional or utilitarian visual art created by hand for use by the maker or small community and contains an element of cultural retention
Foreground	Part of artwork that appears closest to the viewer and often located at the bottom of a picture
Found Objects/Art	Every day or unusual objects used to create artwork – refers explicitly to discarded materials that are <i>found</i> and used – According to Duchamp, “an ordinary object could be elevated to the dignity of a work of art by the mere choice of the artist” – Famous works: <i>Bicycle Wheel</i> 1913 (Duchamp); <i>Fountain (Buddha)</i> Sherrie Levine
Fresco	Method of painting in wet plaster – painting becomes part of the wall on which it was painted – Famous frescos - <i>Sistine Chapel Ceiling</i> (Michelangelo); <i>The Last Supper</i> (da Vinci); <i>The School of Athens</i> (Raphael); <i>The Investiture of Zimri-Lim</i> (dates to 18 th century B.C.)
Glaze	Thin coating of minerals applied to ceramics to produce a layer that makes the surface smooth and waterproof
Gothic	Architecture style prevalent from the 1100s to 1600 – features pointed arches, flying buttresses, and stained glass windows
Gouache	Opaque, water-based paint that dries to a dense matte finish
Harmony	Principle of design that refers to combining similar elements in an artwork to accent similarities
Horizon Line	Imaginary line drawn across a picture and is considered the eye-level line – often used to determine reference points and focal points
Impasto	Thickly applied paint to create a textured surface
Impressionism	Late 1860s art movement that focused on spontaneous, unblended brushstrokes of colors to capture effects of light – named after Monet's <i>Impression: Sunrise</i> - Famous impressionist artists: Pissarro (called the <i>Dean of Impressionist artists</i>), Cassatt, Manet, Degas, Renoir, Monet
Ink	Art medium or pigment mixed with water and chemicals used for drawing
Kiln	Furnace in which clay is fired

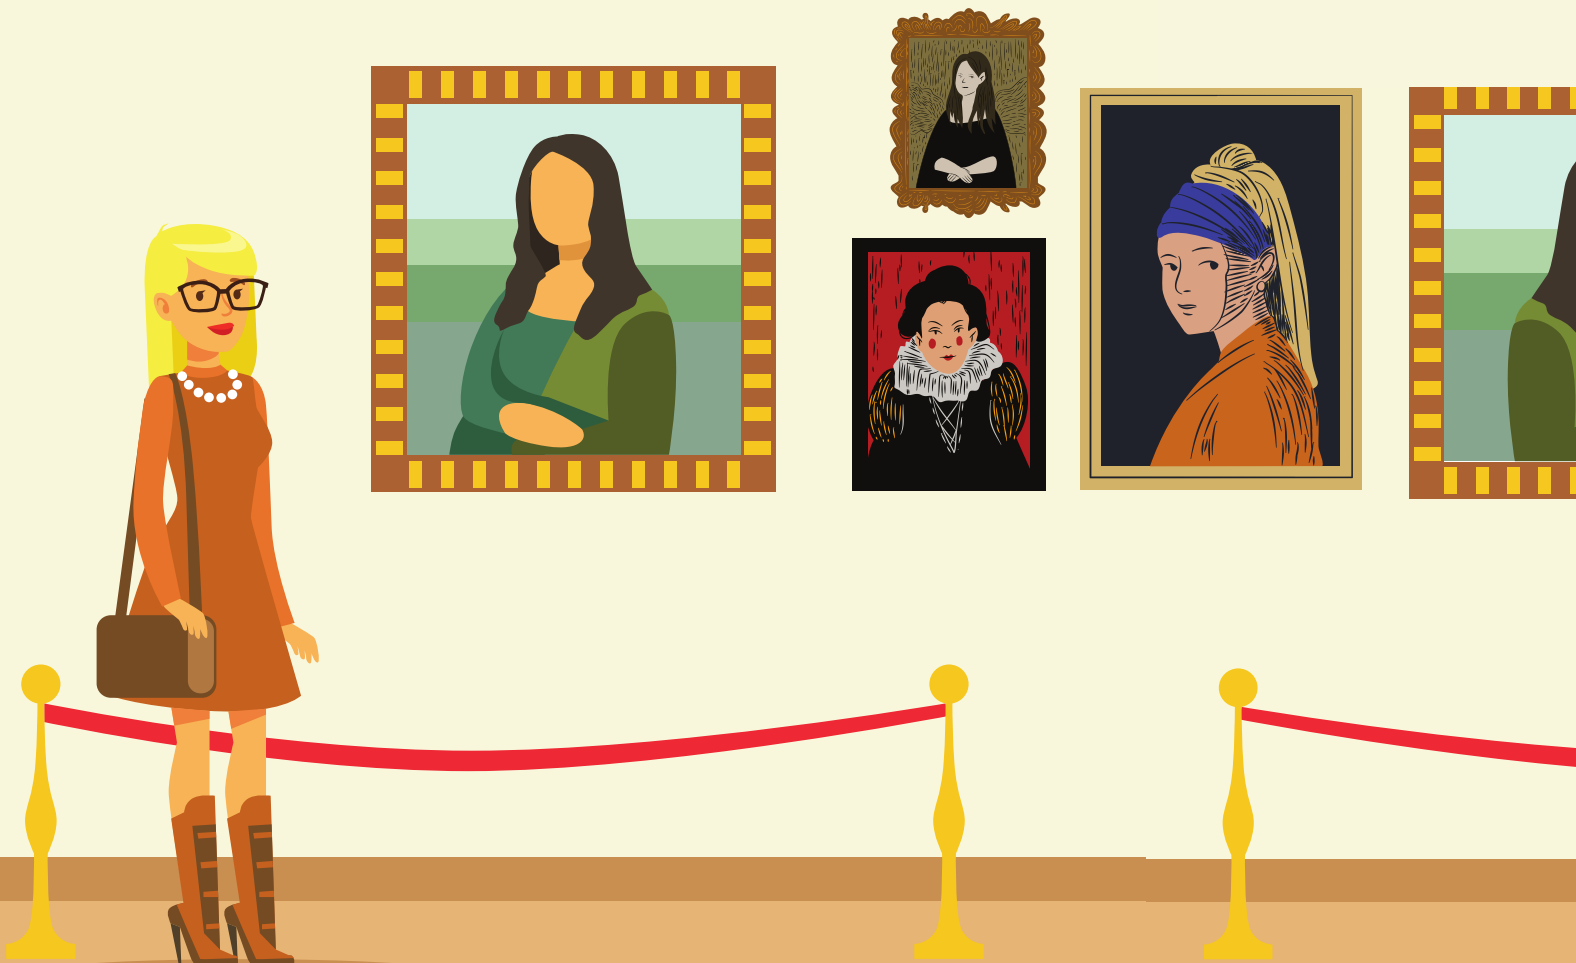

Landscape	Paintings where the primary subject matter is natural scenery – Space in landscape paintings divided into three parts: <i>foreground</i> , <i>middle ground</i> , and <i>background</i> – Famous landscape artists: Wang Wei, Titian, Brueghel the Elder, Constable, Cole, Durand
Media	Materials used to produce art – may be two or three dimensional
Medieval Art	European art of Middle Ages (800 – 1400) – purpose to instruct in the Catholic faith – the works stressed the importance of religion – Characteristics include elaborate patterns, symbolic use of color, and the inclusion of large areas of gold in the paintings – Famous artists: Cimabue, Giotto di Bondone, Hubert, and Jan van Eyck
Metal	Three-dimensional art medium, usually bronze, copper, tin, steel, or aluminum
Mixed Media	Any artwork that uses more than one art medium
Mobile	Sculpture with free-moving parts – can be hanging or with the base on the ground and free-moving components hanging from a bar, etc. – Name coined by Duchamp to describe Calder’s work - Famous mobiles: <i>The Cone</i> (1960), <i>Vertical Foliage</i> (1941), and <i>Southern Cross</i> (1963) by Calder
Mosaic	Artwork made with small pieces of colored glass or tile, usually set in concrete with adhesive mortar – rose to prominence in Byzantium during the 4 th – 14 th centuries
Motif	Repeated images, patterns, or themes to create visual rhythm
Mural	Artwork created directly on a wall
Neoclassicism	Art movement of the late 1700s and early 1800s – moved art back to the classical style of ancient Greece and Rome – emphasized harmony, realism, clarity, and reason – Most recognized neoclassical artist is David
Oil paint	Slow-drying (usually opaque) paint made of pigments mixed with oil and applied to canvas
Op Art	20 th -century art movement – aka <i>Optical Art</i> – a branch of geometric abstract art in which artists try to create an optical illusion on a flat surface through the manipulation of shapes and colors
Paint	Pigment suspended in liquid with a binder
Palette	Board used by artists to hold and mix colors of paint – can refer to the range of colors an artist uses in a specific work
Papier-Mache	Sculpture medium that uses paper or rags dipped in a paste and formed over an armature
Pastels	Pigments pressed into sticks and used as a dry medium on paper – (can be oil pastels or chalk pastels)
Pattern	Repetition of art elements to achieve decoration or ornamentation
Pencil	Two-dimensional art medium using graphite or other pigment contained in a stick-like drawing device

Persuasive	Purpose of art in which the intent is to move or convince the viewer to a belief, position, action, etc. – Propaganda and advertising are examples of persuasive art
Photography	Means “light drawing” – the art or process of producing images by the action of radiant energy, especially light, on a sensitive surface such as film or an optical sensor – Famous photographers in art: Dorothea Lange, Annie Leibovitz, Ansel Adams, Imogen Cunningham, Margaret Bourke White
Photomontage	Collage made from fragments of photographs, newsprint, or other items – can be a photograph in which prints in whole or in part are combined to form a new image
Pigment	Finely ground powder that gives paint its color
Plaster	Mixture of gypsum powder and water that hardens to a smooth solid medium for sculpture
Pop Art	Art style of the mid-1950s – aka <i>popular art</i> – that portrays images of popular culture like soup cans and comics as fine art – Famous Pop Artists: Lichtenstein, Warhol, Oldenburg, and Johns
Portrait	Subject matter category in which the primary purpose is to portray the likeness of an individual or group of individuals – Famous portrait painters – Gainsborough, Da Vinci, Vermeer, Rembrandt, Kahlo, Sargent, Klimt, Gilbert Stuart, and Wood
Postimpressionism	French art movement of the 1890s in which artists reacted to impressionism with more concern for structure and form – Famous postimpressionist artists: Cezanne (called <i>Father of Post-Impressionism</i>), Gauguin, Van Gogh, Seurat
Pottery	Objects made from fired clay includes earthenware, stoneware, and porcelain
Printmaking	Process of producing images on a flat surface – Various types include relief block, intaglio, and stencil
Proportion	Relationship in size of one component of an artwork to another
Realism	1840s art movement in which artists focused on ordinary people such as peasants and laborers – artists refused to gloss over reality as opposed to neoclassical and romantic artists did – Famous realist artists: Eakins, Millet, Wyeth, Hopper, Courbet
Relief Printing	Printmaking in which the image to be printed is raised from the background
Relief Sculpture	Three-dimensional forms attached to a background
Renaissance	Means “rebirth” – the revival of art and literature in Europe that lasted from the 1300s – 1500s when the modern era began – Many great Renaissance artists worked in Italy under the patronage of the Medici family – Famous Renaissance artists: Da Vinci, Michelangelo, Raphael
Repetition	Combining art elements so that the same elements are used over and over to achieve balance and harmony

Rhythm	use of art elements to produce a visual tempo or the feeling of a regular beat or movement
Ritual	Purpose of art that includes celebration and commemoration
Romanesque	Architectural style prevalent from 100 – 1220 AD – characterized by round arches, small windows, barrel vaults, thick walls, with a lack of ornamentation – Pisa Cathedral is one of most famous Romanesque cathedrals
Romanticism	Art movement of the late 1700s – early 1800s – emphasized emotion and artistic freedom – Famous Romantic artists include: Goya, Constable, Delacroix, Turner, Ingres, and Gericault
Sculpture	Art process of modeling, carving, or joining materials into a three-dimensional form – Famous sculptures: <i>The Thinker</i> (1904) & <i>The Burghers of Calais</i> (1894-95) Rodin. <i>David</i> (1501-04) Michelangelo, <i>Venus of Willendorf</i> (28,000 - 25,000 BC), <i>Ecstasy of Saint Teresa</i> (1647-52) Bernini, <i>The Little Fourteen-Year-Old Dancer</i> (1881/1922) Degas
Self-portrait	Portrait of an artist's own likeness – Rembrandt and Van Gogh painted most self-portraits – Other famous self-portrait artists include Kahlo, Da Vinci, and Durer
Shades	Colors created when black is added to a hue
Still Life	Subject matter art category with the primary purpose of showing inanimate objects
Stone	Natural material used as an art medium for sculptures includes limestone, soapstone, jade, and marble – Sculptures created from this medium use the <i>subtractive process</i> of carving
Subject matter	The focus, core topic of interest, or the main image is used in an artwork
Surrealism	1920s art style in which dreams and fantasy served as subject matter for artworks – Major proponent of Surrealism was Andre Breton, who published <i>The Surrealist Manifesto</i> in 1924 – Famous surrealist artists: Jean Arp, Max Ernst, Magritte, and Dali
Symmetry	Organization of objects or parts of a design so that one side is a mirror image of the other
Tempera Paint	Water-based opaque paint that traditionally mixed pigment with egg binder, although now the paint is mixed with a chemical binder – aka <i>poster paint</i>
Textiles	Artworks created from natural or synthetic fibers – Examples include weaving, basketry, knitting, etc.
Tints	Colors obtained by mixing white with a hue to lighten it
Tones	Colors obtained by adding gray to the hue
Warm colors	Color group associated with reds – these colors tend to move forward in space and have a psychological effect of warmth
Wash	Thin layer of translucent color or ink used in watercolor, brush painting, and infrequently in oil painting
Watercolor	Transparent water-based paint that uses gum Arabic as a binder
Wood	Natural material used in sculpture using the subtractive process to create images

CATEGORY 10

FAMOUS ARTISTS AND THEIR BEST KNOWN WORKS – EMPHASIS ON MICHELANGELO, SEURAT, CASSATT, PICASSO, MONET, LEONARDO

X. Famous Artists and Their Best-Known Works – Emphasis on Michelangelo, Seurat, Cassatt, Picasso, Monet, Leonardo

A. Michelangelo Buonarroti (Italian 1475 – 1564) – Renaissance Sculptor, Painter, Architect, & Poet

https://www.youtube.com/watch?v=tSG4oleq_us&t=100s

During his lifetime, Michelangelo was considered the greatest living artist in the world. His biography was published while he was alive. Two competing biographies were written – one by Giorgio Vasari (1550) and a second by Michelangelo's assistant Ascanio Condivi (1553). Additionally, he was one of the wealthiest artists of his time. He was buried at the Church of Saint Apostoli in a lavish funeral ceremony when he died.

Michelangelo Buonarroti was born in Florence, Italy, on March 6, 1475. When he was only six, his mother died. He became an apprentice at age 13. His father arranged for him to be paid as an artist – an unusual request at the time. While the apprenticeship was to last three years, Michelangelo left after only one year, saying he had nothing else to learn. During this time, he copied works by Ghirlandaio, Giotto, and Masaccio, and several of these copies survive. Lorenzo de Medici noticed his talent and enrolled him in the Humanist Academy, surrounded by artists, poets, and intellectuals.

During this time, Michelangelo completed the relief sculptures of *Madonna of the Stairs* (1490) and *Battle of the Centaurs* (1492). *Madonna of the Stairs* shows the Virgin Mary sitting on a block, either nursing or holding the sleeping Christ child. This sculpture is the earliest existing Michelangelo work. *Battle of the Centaurs* was the last work he created for Lorenzo, who died that year. This unfinished relief sculpture shows the battle between the Lapiths and the Centaurs.

When Lorenzo died, he returned home for a time before moving to Rome. While in Rome, he

sculpted *Bacchus* and *Pieta*. A wealthy banker commissioned the statue of Bacchus to be placed in his garden. Michelangelo sculpted *Bacchus* holding a lionskin and a bunch of grapes in his left hand and a cup in his right hand. A small Faun eats from the grapes. The second sculpture from this period is *Pieta*, the **only** work signed by

Michelangelo. The statue of a young Mary holds the lifeless body of her dead son draped across her lap.

In 1964, *Pieta* was loaned to New York City for the World's Fair. It was shipped across the Atlantic in a crate that would float if the ship sank. A radio transmitter enclosed in the crate was used as a locator device if the crate sank. In 1972 Lazlo Toth damaged *Pieta* with a hammer. After a ten-month repair, the Vatican had the sculpture encased in bulletproof glass to protect it from future attacks.

Michelangelo completed several other Pietas. In one version, the *Florentine Pieta*, the Virgin Mary, Mary Magdalene, and Nicodemus support Jesus as he is removed from the cross. Michelangelo sculpted himself as Nicodemus in this eight-foot-tall statue. It was not commissioned and was started when he was 73 years old. Art historians believe the unfinished sculpture was to be for his tomb. Recently, the statue was restored, and the restoration was completed in November 2019 with several work stoppages due to the Covid pandemic.

When he painted, Michelangelo chose reds and yellows against gray or blue. He used oil paint and tempera paints. He is famous for such paintings as the ceiling of the Sistine Chapel. He was also a poet, writing more than 300 poems.

Besides his sculpture and painting, Michelangelo was an accomplished architect. His first important architectural undertaking was the façade of the San Lorenzo church, which was commissioned by Pope Leo X. Michelangelo's design won the competition and was chosen by the Pope and Cardinal Julius de Medici. Unfortunately, the project was interrupted and never completed.

His second important commission came from another Medici, Pope Clement VII. This structure, the Laurentian

Library, was completed in 1560 after Michelangelo supervised much of the work. The staircase of the Library is its most remarkable structure.

Key Works include:

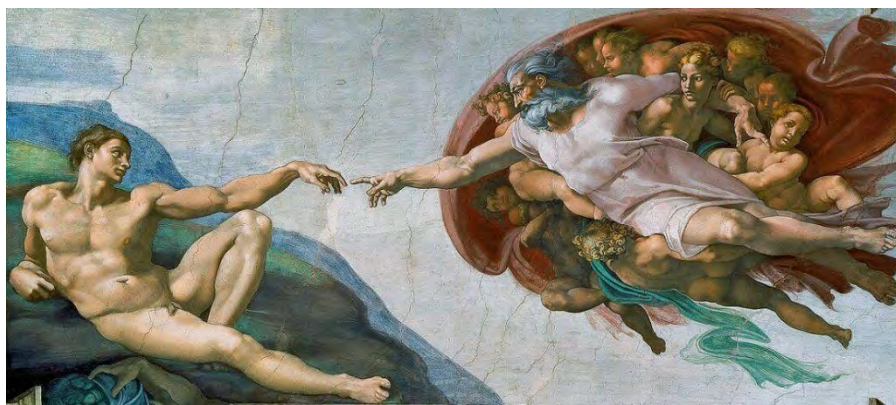

- ***The Entombment (1500-01)*** - unfinished oil-on-wood panel - shows Christ being carried up a flight of stairs to his tomb

- ***David (1501-04)*** – portrayed as a youth before his battle with Goliath – it is a massive marble sculpture weighing more than 6 tons and being 17 feet tall – sculpted from a single piece of marble – the statue's right hand is disproportionately large

- ***Sistine Chapel Ceiling Frescoes (1508-12)*** - dominated by grays and blues and whitish tones used to simulate marble – vivid colors seen in prophets' and sibyls' robes and the warm flesh tones of the nudes – the paintings include biblical stories from Genesis, prophets, and sibyls, four pendentives showing violent episodes in Jewish history, pictures of the ancestors of Jesus, children, and shields

- ***The Creation of Adam* (1508 – 12)** – a scene from the Sistine Chapel - shows God floating through the Heavens, surrounded by cherubs, and dressed in a flowing gown – He extends his right forefinger to touch the finger of Adam, who lies across the green land

B. Georges Seurat (French 1859 – 1891) Neo-Impressionism/ Pointillism – Painter

<https://www.youtube.com/watch?v=rDW4wSTm->

George Seurat was the son of a bailiff and property owner in France. The cottage owned by his father was where Seurat often painted. He took a sculpting class and then enrolled in an art school in Paris. When he was 20 years old, he entered the military and painted pictures of the sea, beaches, and boats around where he was stationed.

He took steamboats to the island of La Grande Jatte. He set many paintings on this island, including his masterpiece, *A Sunday on La Grande Jatte* - 1884. This painting is Seurat's largest and most famous painting. In this painting, rich people wander through the

countryside with parasols. One woman has a leash attached to a small brown monkey. During this time, he worked on the island and in Normandy. He made friends with Camille Pissarro and Signac. He used the paintbrush to create small paint dots on the canvas instead of painting lines. This painting technique caused the style to be named Pointillism.

He exhibited one of his other paintings before it was finished as if he had a premonition of his death. His last painting, *Le Cirque* (1891), was the third panel in a series of circus paintings. In this painting, a horseback rider dressed in yellow balances on the back of a white horse while the ringmaster and a clown join her in the center ring of the circus.

He caught a cold, developed an infectious heart disease, and died on Easter Sunday, 1891. His son contracted the disease and died a few days later, on April 13.

Seurat was the founder of pointillism. When he died, he had painted seven monumental paintings, including *A Sunday Afternoon on La Grande Jatte*, and 40 smaller paintings and sketches. He also completed 500 small drawings and several sketchbooks.

Key Works include:

- ***Bathers at Asnieres*** (1884) – Seurat's first major work – shows working-class men and boys relaxing on the banks of the River Seine – two boys are in the river, and another shirtless boy has his feet in the river – a small brown pup lays beside a man with a black bowler hat – painted before he began pointillism

- ***Le Chahut*** (1889-90) – shows four men and women performing the cancan (*chahut*) in a Paris dance hall – the men have upturned mustaches – the musicians play in the lower left corner of the painting

C. Mary Cassatt (American 1844 – 1926) Impressionist – Painter & Printmaker

<https://www.youtube.com/watch?v=nutq0QigNDQ>

Mary Cassatt was the daughter of a wealthy family. Although she was born in Pennsylvania, she spent much of her adult life in Paris. She became close friends with Edgar Degas, who painted several paintings of her in Paris. Her first significant art show was at the Paris Salon in 1872. Cassatt's principal *motif* (subject matter) included women caring for their children and children playing. Her art career was short due to poor eyesight caused by diabetes; by 1914, she had quit working.

Cassatt never married and used her family members as models for her paintings. *Mother About to Wash Her Sleepy Child* (1880) is one of her Impressionist paintings of a mother and child. The picture is considered her first painting on this subject.

The settings for Cassatt's paintings were limited because she could not go to cafes and restaurants alone to paint. This may have influenced her choice of subjects, creating "Madonna" paintings of the typical mother and child.

Children Playing on a Beach (1884) shows two toddlers playing in the sand on a beach. Each child is not paying attention to the artist or the other child. The boats in the background melt into the distance, emphasizing the children.

Key Works include:

- ***Girl Arranging Her Hair*** (1886) – one of the most admired paintings at the last impressionist exhibit in 1886 – Degas purchased the painting for his collection –

shows a young girl in white chemise, twisting her hair as she admires her reflection in a mirror not seen in the painting

- ***The Boating Party*** (1893 - 94) - painted at Antibes on the Mediterranean – shown in her first one-person exhibit – shows the influence of Japanese art in its color and off-center placement of subjects – the large boatman almost appears to come out of the painting, but still focusing on the mother and child

D. Pablo Picasso – (Spanish 1881-1973) – Modernist (Cubist) Painter and Sculptor

<https://www.youtube.com/watch?v=MYCoAioW6S8>

Although Picasso is often viewed as the master of cubism, his work moved from naturalism to cubism to surrealism. He was a sculptor, printmaker, ceramics artist, etching artist, and writer.

He shaped the direction of modern art throughout his long career. Besides seeing two World Wars, the Korean War, and the Vietnam War, he appeared in film, had four children, and was a poet.

He was born in Spain but lived most of his life in France. Picasso was taught art by his father at the School of Fine Arts in Barcelona and would later attend the top art school in Spain, the art academy in Madrid. While in art school, he painted one of his earliest works, his sister's communion, when he was only 15 (*First Communion* (1896)). It shows his sister kneeling before the altar in a bright white communion dress.

When he moved to Paris in 1900, he was so poor that he had to burn many of his paintings for heat. By 1901, he moved back to Madrid, where he illustrated articles and created cartoons for *Young Art* magazine. During this time, he began signing his work simply as Picasso.

Picasso's work can be easily identified and categorized in definite periods. Those periods include:

- Blue Period – 1901 – 1904
- Rose Period – 1904 – 1906
- African Art and Primitivism – 1907 – 1909
- Analytic Cubism – 1907 -1912
- Synthetic Cubism – 1912 – 1919
- Neoclassicism and Surrealism – 1919 – 1929

His later years included combinations of these period works, although the Blue Period, Rose Period, and African Period are his most recognized and different periods. During the last 17 years of his life, from 1956 – 1973, he created more than 17 portraits.

After the suicide of his friend, Picasso's works turned dark. His Blue Period featured paintings of beggars, including starved mothers and children, painted in dark blues and violets. One of the most famous paintings of this period includes *The Old Guitarist* (1903). An old beggar sits along the street, his head bowed, playing a brown guitar with bony hands. A special note about this painting should be recognized. This painting is an excellent example of *pentimento*, where another image can be seen behind the painting. The *pentimento* in *The Old Guitarist* shows at least two other paintings on the canvas under his

masterpiece. You can see the image of a woman in this detail from the painting.

During his Rose Period, Picasso's work was much brighter, using shades of red and pink in his clowns and circus figures paintings. Harlequins were also favorite subjects for the artist during this period. *Acrobat and Young Harlequin* (1905) shows characteristics of both the Blue and Rose Periods. While the subject matter is dressed in red, the melancholy expressions of the two performers remind us of his Blue Period subjects.

His African-influenced Period was also called his Black Period. His most famous painting of this period, *Les Femmes d'Alger (O Version O)* (1907), is recognized as the beginning of cubism. The large painting took nine months to complete. The two figures on the right are painted with African masks, showing the influence of African art on the painter's work. Avignon is not the name of the famous French city but a street in Barcelona.

Picasso worked with Georges Braque from 1907 to 1909, and their work during this period became the beginning of Cubism. The paintings from this period consisted of earth tones and images taken apart and put back together with elaborate geometric forms. A sculpture from this period, *Head of a Woman, Fernande* (1909), shows the head and face as a series of flat planes stuck together. The bronze sculpture's jagged forms and sharp geometric surfaces make it the first Cubist sculpture.

Ma Jolie (1911-12), which means "My Pretty Girl," is a painting from his Synthetic Period. Picasso

named the artwork after a song that was popular at the time. In the lower center, a strummed guitar can be seen with four fingers. A treble clef and a floating smile can also be found amid the geometric shapes of the painting.

One of the premier Picasso paintings is his protest of the acts of war. *Guernica* (1937) may be his most famous work. He painted it as a response to the bombing of a Spanish town during the Spanish Civil War. Picasso chose only to use black, blue, and white to create the enormous painting (11 feet tall and 25.6 feet wide). Two prominent figures in the painting (the bull and the horse) are contradictory figures. The bull represents Fascism, and the horse represents the people of Guernica. Picasso demanded that the painting not be returned to Spain until Francisco Franco died and Spain became a free republic. It remained in the Metropolitan Museum of Art in New York until 1981, before it was returned to Spain.

Key Works include:

- ***Boy with a Pipe* (1905)** - painted during Rose Period – shows a boy in France holding a pipe in his left hand and wearing a garland of flowers on his head – one of the most expensive paintings sold by Picasso during his lifetime (\$30,000)

- **Three Musicians (1921)** – painted during the Synthetic Cubist Period – large painting more than 2 meters wide and high – gives the appearance of cut paper – clarinet player on left dressed as Pierrot in blue, guitar player in the middle dressed as Harlequin in orange and yellow diamond-shaped costume, and a singer dressed as a monk on the right holding sheet music – Gertrude Stein called the painting a still-life

E. Claude Monet – (French 1840 – 1926) Impressionist Painter

https://www.youtube.com/watch?v=kzL1nOXZI-I&list=PLsebtkgX3TD71DFfs_3-A2jVXR8XIO2nw

Water Lilies and *Impression: Sunrise* are the most famous works by this French painter. Monet's painting (*Impression: Sunrise*) gave the name to the Impressionist art movement. He began as a realist painter whose teacher encouraged him to paint outside. One of his first paintings was

View at Rouelles, Le Havre (1858). This painting is a realistic landscape that could have been a color photograph. A small boy sits on the creek bank fishing. This painting focuses on the accuracy of the subject matter.

In 1861, Monet was drafted into the cavalry. While he did paint a few works during his service, none survived, but he used his memories of his deployment in future paintings. When he returned to Paris, he shared a studio with Renoir where the two artists focused on historical art. Since the artists often painted together, they influenced each other's works. During this time, he painted a life-size portrait of his future wife, *Woman in a Green Dress* (1866), for exhibition. He completed the

work in only four days. Other later paintings of Camille are more representative of Impressionism, as seen in *Madame Monet and Child* (1875). In this painting, Camille is busy sewing as a child seated at her feet looks at a book while a toy horse sits near the child.

During a visit to the Netherlands with his wife, he painted 24 canvases, including *Zaandam* (1871). This painting begins to show his impressionist style as the reflections in the water and even the buildings lack a definition of line. He used long lines of white to show where the water reflects the light. Monet bought a floating studio on the Seine River, where he painted many landscapes.

Picasso, Cezanne, Pissarro, and Degas presented their first exhibit in 1874. Monet exhibited *Impression: Sunrise* (1872) at this exhibition. Art critics made fun of the paintings. In *Impression: Sunrise*, a bright orange sun casts an orange reflection in the water. The color of the sun is so intense that other images in the painting seem to disappear, causing the viewer to search for the boats in the harbor.

One of Monet's early works is the series of paintings of the Rouen Cathedral. This series of artworks includes more than 30 paintings, each at a different time of the year and day. The painting shown here is the 1894 oil on canvas called *Rouen Cathedral, Full Sunlight*. Other series created by Monet include wheat stacks (*Wheatstacks (End of Summer)* (1890-91)) and water lilies in his garden pond (*Water Lilies – Evening Effect* (1897-98)). Using a single subject for a series of paintings allowed Monet to show how the light changed the view of a given subject.

Key Works include:

- ***Haystacks* (1890) (aka *Wheatstacks*)**
- series of 25 paintings with a similar scene painted at different times of the day and different seasons – he started on two paintings on the same day and had his assistant bring more canvases because the light was changing so quickly that he couldn't capture the image as he wished – he returned with the unfinished canvases and tried to match the time of day with the canvas most like that image

- ***Woman with a Parasol (1875) (aka The Stroll or Madame Monet and Her Son)*** – depicts his wife and their son on a windy day – viewer appears to be seated at the bottom of the hill looking up at the figures and the sky

- ***The Artist's Garden at Giverny (1900)*** – painted near the end of his life when Monet was painting pictures of areas around his home – the flowers are pink and purple irises in areas underneath trees with different amounts of light falling on the flowers – his house can be seen in the background

F. Leonardo da Vinci (Italian 1452 – 1519) – Renaissance - Painter, Draftsman, Sculptor, Architect, and Engineer

https://www.youtube.com/watch?v=RveXDtD_F-s

Leonardo da Vinci's name is translated from the Italian meaning ***Leonardo from Vinci***, a small town in Tuscany. He has no surname (last name), only a designation of his birthplace, which was a customary practice. He is recognized as a ***true Renaissance man***. His paintings, *Last Supper* and *Mona Lisa*, are considered two of the most famous and influential artworks of the Renaissance. Besides his paintings, his notebooks illustrate scientific inquiry centuries ahead of his time.

Interesting facts about Leonardo include:

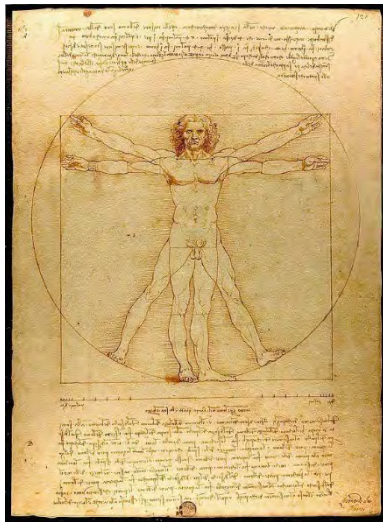

- Ambidextrous and could write and draw forward and backward with both hands simultaneously creating a *mirror script*
- An accomplished musician – he sang and played the lyre and flute

- Completed 72-page illustrated manuscript *Codex Leicester* (aka *Codex Hammer*) – owned by Bill Gates – only copy that resides outside Europe
- Less than 20 surviving paintings

As a young boy, he was apprenticed to the artist Andrea del Verrocchio, where he was trained in painting and sculpture. Some of del Verrocchio's work has been attributed to Leonardo. One such example is the *Baptism of Christ* (1475). In this painting, the angel kneeling on the left is attributed to Leonardo. Art historians also consider the landscape to be the work of the young apprentice. Leonardo completed multiple pen and pencil drawings, including various technical sketches during this time.

When he left Florence, he served as the *painter and engineer of the duke* in the court of Duke Ludovico Sforza in Milan, leaving unfinished the panel painting *Adoration of the Magi* (1481).

The *Vitruvian Man* (~1487), a drawing by Da Vinci, has become a cultural icon. Notes on the pen and ink drawing are based on the work of the architect Vitruvius Palladio. The male figure is

superimposed in two positions, with the arms and legs splayed apart simultaneously inscribed in a circle and a square. The drawing and text are called the *Canon of Proportions* (aka *Proportions of Man*).

The painting, *The Virgin of the Rocks* (1483-1486), caused a ten-year legal dispute. Due to this legal dispute, Leonardo painted a second version of the piece in ~1508. The version on the left is the second painting. These paintings are also known as *The Virgin and Child with Saint Anne and John the Baptist* (the second version) and *The Virgin and Child with Saint Anne* (the first version).

While in Milan, he sculpted the giant equestrian statue of Francesca Sforza in clay. The statue was never cast in bronze due to the need for

metal to make cannons for the imminent War of Ferrara. The clay statue was destroyed during that war after having been exhibited only once at the marriage of Emperor Maximilian.

Key Works include:

- ***Last Supper*** (1495 – 98) – shows the Passover feast of Christ and the 12 disciples – a large mural painted with tempera on a base that he mixed himself on the stone wall of the Dominican monastery Santa Maria delle Grazie in Milan

- ***Mona Lisa*** (aka *La Gioconda* 1503 – 06) – size 77 x 53 cm. - became standard for future portraits – believed to be a portrait of Lisa de Giocondo, the wife of a Florentine merchant – contains two landscapes, the back one becoming a backdrop for the painting – uses *sfumato* to create soft lines of the woman and the background – hangs behind bullet-proof glass in Louvre – stolen in 1911 from Louvre (Picasso and Apollinaire were arrested as suspects) – was found in Italy after an Italian immigrant (Vincenzo Perugia) tried to sell it to an art dealer

- ***Salvator Mundi*** (1499 - 1510) – called *Savior of the World* – sold at auction in 2017 for \$450.3 million – the highest price paid for a work of art at auction – scholars question if the entire piece can be attributed to Leonardo – shows Christ making the sign of the cross – has very tight long curls

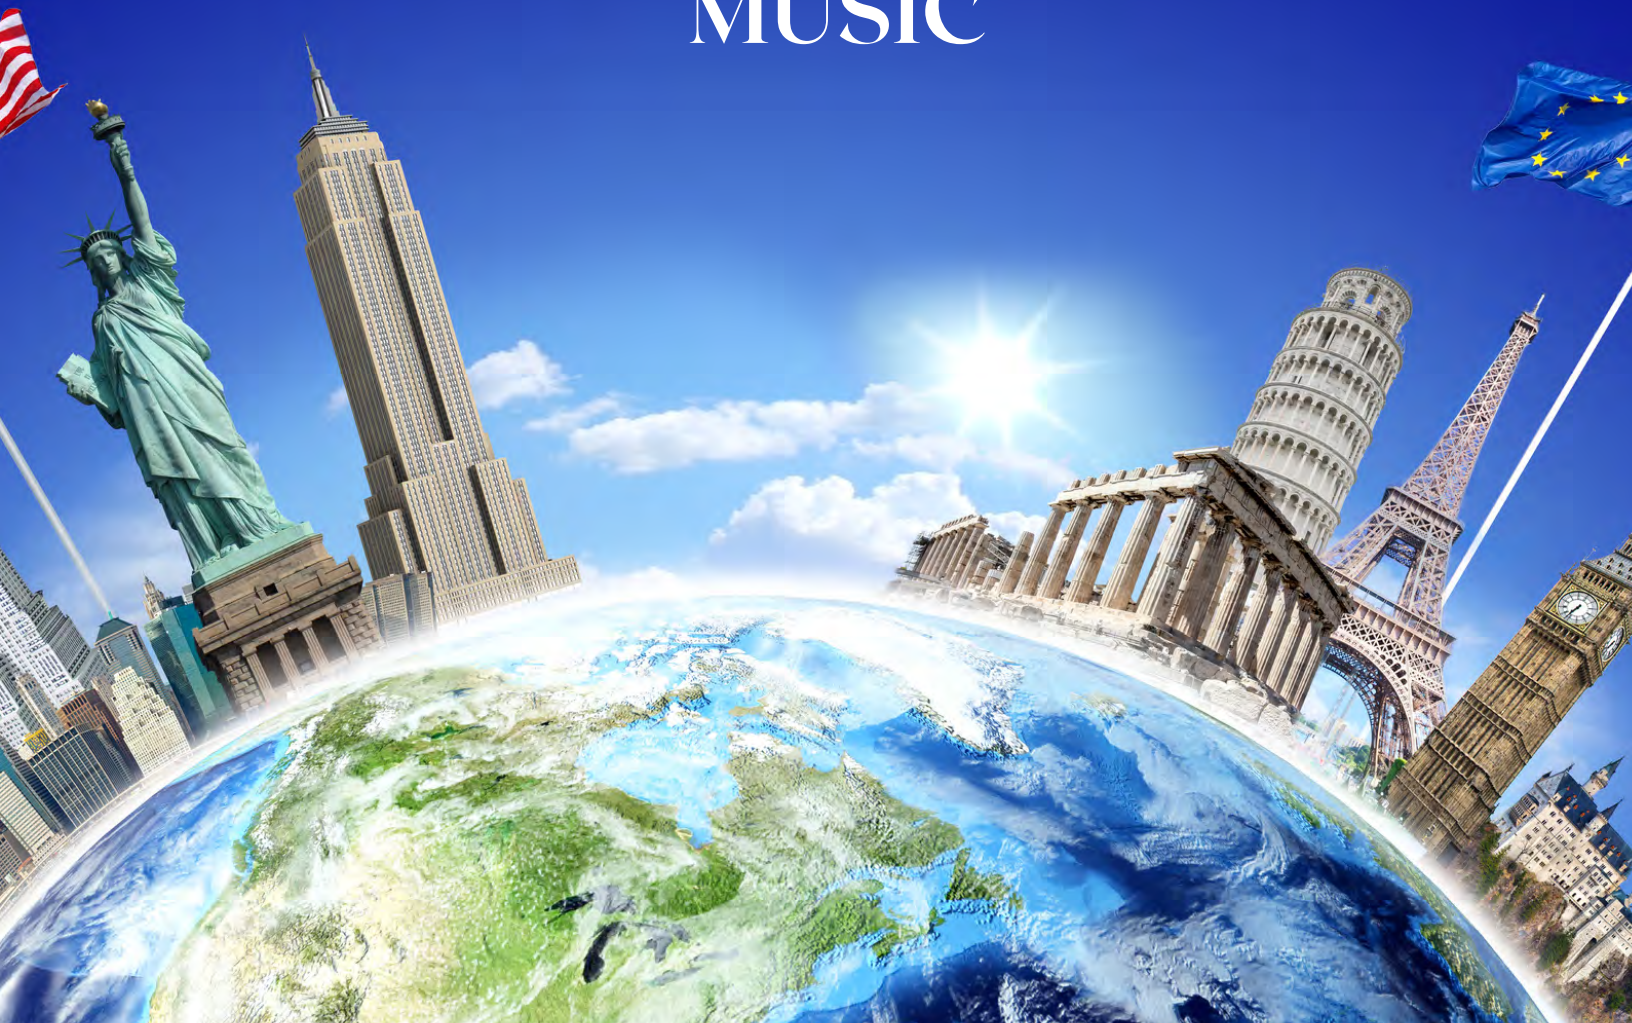

- ***The Lady with an Ermine*** (aka *Cecilia Gallerani* 1489 - 90) – oil on walnut board – probably painted while the subject was the mistress of Ludovico Sforza – heavily overpainted with darkened background – an X-ray of the painting revealed the presence of a door in the background – was stolen by Nazis and recovered in 1939 with the footprint of a Nazi soldier on the painting

CATEGORY 11

CULTURES: WEST
AFRICAN, NATIVE
AMERICAN, AMERICAN
FOLK, COLONIAL
AMERICAN DANCE,
DRAMA, VISUAL ART, AND
MUSIC

XI. Cultures: West African, Native American, American Folk, Colonial American – (dance, drama, visual art, and music)

Culture	Dance	Drama	Visual Art	Music
West African	Ritual and social recreation Geled Festival dancing – masked dancer utters incantations to placate witches Yoruba dance – ritual dance to honor god Shango – priest dances into a trance showing wrath of god of thunder Housa women – healing dance to get rid of demons Masquerade dancers – dance as gods or animals with masks that represent the characters Processional dances led by ruler through the villages Also used for educational purposes Igogo dance - young men stamping movements to put	Folktales – Trickster folktale - like Brer Rabbit – involves one animal outsmarting another. Griot – oral storytellers that make their living from telling traditional tales – job is to pass traditional stories from one generation to another	Textiles – Applique cloths – shaped pieces of material sewn onto a piece of fabric to create a picture or design considered powerful and prestigious – used in tentmaking and ornaments. Story fabrics - handprints, patterns, and visual arts – tells about events like hunts or accomplishments of kings Kente cloths - royal cloths worn on special occasions by Ashanti people – narrow strips of silk or other fabric sewn together to symbolize an individual's values, political views, or family history	Call and Response - leader sings or plays a short musical phrase, and then the chorus gives a response by playing or singing another short musical phrase Drum playing
